SEALCRO PRESS-FIT

TEFLON RECEPTACLES

The "Press-Fit" Cloverleaf Receptacle provides economical, yet uniformly perfect solder joints by means of dip-soldering with metal chassis. The unique Cloverleaf configuration permits insertion of four, or more wire leads, plus an optional center pin post for mounting additional components after the dip-soldering operation. The Cloverleaf design provides an encompassing hold on the leads, and excellent capillary flow of solder. The Cloverleaf receptacle is a Sealectro "Press-Fit" design. Virgin Teflon insulation, precisely machined to "Press-Fit" into the chassis provides fast, positive installation.

The reliability of dip solder joints made with the Cloverleaf receptacle, combined with the inherent dependability and repairability of metal chassis instrumentation packaging, while the low cost of the terminal and its installation provides a new and better assembly technique for premium quality radio and television manufacturing.

- Best of both—dip soldering economies and uniformity with metal chassis reliability and repairability.
- Fast, positive "Press-Fit" installation. Terminal may be oriented by insertion tool.
- Optional center pin for additional component mounting.
- Cloverleaf design provides holding position of leads during soldering operations.
- Shaped and plated for maximum capillary flow of solder. No pre-cleaning required.

Optional center pin provides top and bottom extra component mounting. Extremely useful in high-density packaging, or for after-mounting of delicate components.

Fig. 660

"Press-Fit" installation for deep holes. As the terminal is pressfitted into the hole, the lands and grooves of the body are deflected upward, thus providing a high degree of pull-out strength as illustrated in the accompanying sketch.

Typical deep hole terminal Type FT-SM-705-L2 is a feedthru featuring a weld terminal at bottom. In this particular case, the wire is welded to the bottom terminal and drawn through the hole before terminal is pressfitted into place.

SKT-0804—GUIDED ENTRY TEST POINT JACK FOR INCREASED CHASSIS PULL-OUT STRENGTH

Featuring a beryllium-copper formed lug with unique design configuration, the SKT-0804 test point jack offers greater pull-out strength and high torque resistance. The jack is designed to provide guided-entry for an .080" diameter probe. The SKT-0804 construction permits uniform retention and greater support of the Teflon bushing by the lug.

CITIZENS BAND CRYSTALS

Extremely accurate crystals, designed to meet FCC tolerance of $\pm .005\%$. Recommended for use with 3rd overtone type oscillator having approximately 32 mmfd. input capacities. (For use with other oscillators a trimming capacitor may be necessary). These crystals match most Class D equipment in use today.

All crystals are stamped with channel number, frequency, and use (transmitting or receiving). Std. Pkg. 1

**"SNAP ACTING"**MOMENTARY
CONTACT**SWITCH**

PRECISION SNAP-ACTING SWITCH A precision snap-acting switch is a mechanically operated electric switch having predetermined and accurately controlled characteristics, and having contacts other than the blade and jaw, or mercury type, where the maximum separation between any butting contacts is 1/8 inch.

MOMENTARY CONTACT SWITCH A momentary contact switch is a switch which returns from the operated

condition to its normal circuit condition when the actuating force is removed.

ACTUATOR An actuator is the mechanism of the switch or enclosure which, when moved as intended, will operate the contacts.

OPERATING FORCE Operating force is that straight line force in the designated direction applied to the actuator to cause the switch contacts to snap to the operated contact position.

Std. Pkg. 5

PRETRAVEL Pretravel is the distance or angle to which the actuator moves from the actuator free position to the actuator operating position.

OVERTRAVEL Overtravel is the movement of the actuator beyond the operating position.

MOVEMENT DIFFERENTIAL Movement differential is the distance or angle from the operating position to the releasing position.

ERMAN H. SMITH, INC.

's Sound Planning to Specify SMITH for ELECTRONIC COMPONENTS"

TEFLON* SPAGHETTI TUBING

ing is ideal for slip-on insulation in electrical and electronics applications. Its exceptional insulating properties provide greater reliability and resistance to high temperatures. Due to its resistance to soldering cracks, shrink-back during soldering is virtually eliminated.

teflon tubing is available in most AWG sizes from #30 to #0, in three basic wall thicknesses: Standard (.020"), Thin Wall (.009 to .015"), and Lightweight (.006 to .012"). Specific wall thickness for various sizes is detailed in the table. All sizes are available in Natural Teflon, and any of 10 colors as indicated in the Color Chart.

Standard and Thin-Wall tubing in sizes AWG #30 to #8, and Lightweight tubing in sizes AWG #28 are supplied in 100-foot dustproof, re-usable reels, polyethylene covered and closed with a special plug. Sizes to AWG #0 are carefully packaged in 50 foot coils to prevent distortion of the tubing.

"Multi-Switches"

"MULTI-SWITCH" MULTIPLE STATION PUSH BUTTON SWITCHES

New basic design simplicity provides a multiple station push button switch that's rugged, compact, versatile and extremely flexible in functions. All switching components—frame, stack switches, lamps and accessories are changeable to give you hundreds of circuit and function combinations. You can order a "Multi-Switch" with the function you now desire; and later change circuits and/or functions in the field by simple positioning adjustments of "stop plate", "latch bar spring" and/or interchanging switch stacks. For a complete multiple station assembly, you must order the proper frame and the necessary stack switch for each button on the frame. Optional accessories include lock-out bar and solenoid release. Frames can be set up for: 1. Interlock; 2. Non-Lock; 3. All-Lock; 4. Interlock and Non-Lock combinations; 5. All-Lock and Non-Lock combinations. Interlock action restores to normal any previously actuated buttons when actuating a button. Non-Lock is momentary action of each button. All-Lock is accumulative locking of all buttons with restoration of all buttons to normal when release button is depressed. Specify switching function when ordering the frames listed below.

SERIES 7000 NON-ILLUMINATED FRAMES

A Switch frames mount on panels up to 3/4" thick, with 3/8" depth behind panel. End brackets of frames have four No. 8/32 tapped holes for mounting. A round brown push-on button is furnished for each station; one extra red button included for use when switch requires a release. Center to center distance between buttons is 3/4". Standard plunger is 1 1/4" long, can be supplied up to 4 3/4" long on special order. Switch frames with buttons on 3/4" centers are available in Series 8000. This Series has all other features of Series 7000. Series 7000 "Multi-Switch" frames available from 1 to 37 stations. Series 8000, from 1 to 31 stations. "516" PLUG

the most frequently used three-circuit plug. The accepted standard for many years in communication networks, circuiting of instrument systems and many other applications. Supplied on TRIMM 1 series patch cords. Polished red fiber shell furnished; black or gray shell also. Shell can be attached without removing cord. No. 516 plug interchangeable with WE 310; No. 516-10 plug with Mil PJ-051.

"506" PLUG — TWIN, THREE-CIRCUIT

standard twin plug for broadcast applications. Now widely used in the instrumentation and missile control fields. Supplied on TRIMM No. 840 series cords. Live circuits connected to tips of each plug; shield, if used, connected to sleeves which are electrically common. Sleeves are spaced $\frac{3}{8}$ " c. to c. Self-aligning construction. Shell, molded of bakelite, is notched along edge to indicate correct polarization. Interchangeable with WE 241 and 241.

"501" PLUG

used on high quality military communication equipment. Commonly referred to as PJ-055. Black shell is furnished for non-shielded types and nickel plated brass for shielded types; red plastic shell optional.

"96" SERIES JACK PANELS

Extensively used in the broadcast field, on instrumentation systems, communication networks, etc.

Uses $\frac{3}{8}$ " thick bakelite panel with appropriate end brackets, side reinforcing strips and designation strips. All jack bushings are insulated from each other. Jacks, as ordinarily supplied (mounted on panels) have offset ground lugs, which considerably reduces wiring cost of installation. Straight ground lugs (duplicating W.E. jacks) available. Types 96-71, 96-72, etc., use tip rings and sleeve plugs (No. 516 and No. 517); others usually used with twin plugs (No. 506) but will fit other standard two-circuit jacks.

TUBE SOCKET TEST ADAPTERS

T-789

T9N

TUBE SOCKET TEST ADAPTERS are ideal for making voltage resistance and wave form measurements from the tube side of electronic equipment. To use, insert adapter between tube and socket, and replace tube in adapter socket. Special test tabs are recessed on the adapter skirt and have a hole to grip test probe and protect operator's fingers during insertion and withdrawal. Regular alligator test-clipped probes also hold on tab and socket. Castings are low loss phenolic and fit all shield bases for miniature and noval type or into standard tube clamps. Reduced body diameter permits insertion into new telescoping shields. Adapter socket contacts are beryllium copper, silver plated for long life and low resistance. Electrostatic capacity between adjacent leads of the adapter is approximately 1 micro-micro-farad. Flash over voltage between adjacent terminals is in excess of 1500 volts DC.

Adapters may be purchased separately or in kits. Kit T789 consists of the 3 popular "must have" sizes, 7-pin miniature, 8-pin octal, 9-pin noval plus a P1 probe packed into a handy clear plastic carrying case.

Kit T429 consists of 9 adapters as listed below packed in a sturdy plastic case and is a commercial equivalent of the well known Navy tube socket test adapter kit.

EXTENDED TUBE SOCKET TEST ADAPTERS

For most work the short, unshielded adapters are adequate. For hard to reach locations, or where surrounding equipment restricts use of regular test adapters, the 3 to 4 inch extended adapter may be used. In these the leads between plug and socket are individually shielded to minimize coupling. The shield is brought out to a lug on the wall of the adapter and should be connected to the chassis being tested. Capacity to shield is approx. 8 mmf. per lead.

VECTOR PUSH-IN TERMINALS

VECTOR PUSH-IN TERMINALS simplify "breadboarding" and production. Push them into .062" or .093" holes in $\frac{1}{32}$ " or $\frac{1}{64}$ " Vectorbord panels and they hold without staking. (May be staked by clipping off flush with board surface or flattening with a pair of pliers for maximum holding, if desired). All terminals except T9.4A have serrated slots to grip inserted wires. Large slot accommodates most resistor and capacitor wires. Small slot hold transistor leads. The T9.4A is supplied without "teeth" on the wire slots to permit easy removal of leads when soldered components must be changed. The T9.6 has a special "snap-in" slot to accommodate .075-.080 diode leads. All types have thru hole construction enabling riser wires to be inserted down through center of terminal, and slot or hole in shank for additional connections.

SOLDERLESS SPRINGCLIP TERMINALS—Reliable truly solderless terminals for fast setup of experimental circuitry. May be used over and over—permits reusing expensive components by eliminating heat damage. Extremely low contact resistance—less than .002 ohms for T30. Order insertion tool P-92A for easy insertion in .093" holes. Suggested board thickness $\frac{1}{32}$ " for best support of terminal.

AUTOMATIC FIRE DETECTION AND ALARM SYSTEMS

Control Unit #SC-600R Underwriters' Laboratories Approved

COMPARE!

SPECIAL FEATURES MEET AND EXCEED
NATIONAL FIRE CODES PAMPHLET #

MAIN POWER SUPPLY

Input 110-125 Volts AC, 60 Cycles. Maximum current 0.25 ampere. Transformed and rectified to 6 Volts DC, maximum load 2.0 amperes. The Supply is **electrically supervised** so that a failure will sound immediate trouble alarm and automatically transfer to Emergency Power, thus assuring continuity of fire protection. When power is restored, the System automatically returns to Main Power Supply.

EMERGENCY POWER SUPPLY

6 Volt dry battery, Burgess #4F4H or equivalent. Maximum load under alarm condition 2.0 amperes. Order locally.

DETECTOR CIRCUIT

6 Volts DC, maximum current 0.15 ampere. Maximum wire run 5000 ft. #18/2. This Double-Loop Safety Circuit is **electrically supervised** so that a wire break will sound immediate trouble alarm. Emergency circuits compensate for such fault (see N/E Switch), thus assuring continuity of fire protection. Use UL Approved Fire Detector Cable #18/2 for substantial savings in installation.

ALARM CIRCUITS

6 Volts DC, maximum load 1.5 amperes. If only bell is used, it is **electrically supervised** so that a failure sound immediate trouble alarm. If two or more bells are used, and/or Annunciator #A-604 is added to the System, they are alternately connected to the two alarm circuits provided. Use #14/2 wire.

NORMAL/EMERGENCY SWITCH

Provides emergency circuit adjustment.

- A) Compensates for wire break in Detector Loop, permitting full response from every Detector until repairs are made.
- B) Silences Trouble Buzzer but maintains Red Light to show emergency condition.

TEST/RESET/SILENCE SWITCH

Provides simple operating procedure.

- A) Test the System.
- B) Silence all Firebells and transfer to Red Light.
- C) Reset to normal supervised operation.

CABINET

14" x 9" x 4". Gray Hammertone. Surface Mount. Cylinder lock, 2 keys.

SYNCHRONOUS MOTORS AND TIMERS

Versatility is the characteristic which design engineers need — and find — in Bristol Synchronous Motors and Timing Devices. Bristol's unusually broad experience and range of design and manufacturing skills are particularly valuable where special requirements must be met.

The devices shown are among the most widely used. All can be mounted in any position, and take a minimum of space. Materials are selected on the basis of their suitability to provide long service, and perform well under a variety of conditions.

Bristol engineering service is available for applications that require custom design and manufacture.

Series 61 Time Delay Relay. Universal Time Delay Relay provides self-holding solenoid starting with adjustable timed contact operation. Series 61 provides three types of load contacts which give seven types of load circuit operation in a single unit. Made to order crystals in pressure type holders can be supplied in five types as shown. All TEXAS CRYSTALS are cut, lapped, and etched to exact frequencies. They are supplied for oscillator circuits having 32 MMFD capacity, unless otherwise ordered, as the crystal frequency will vary with capacity of the circuit.

Low frequency crystals from 1001 KC to 2100 KC are space mounted—all others are pressure mounted. The advantage of the pressure mount crystal is its ability to handle more current (up to 50 Milliamps) without fracture. Order by frequency, type holder, tolerance, and circuit capacity (if known) or type of equipment in which it is to be used.

HERMETICALLY SEALED CRYSTALS MADE TO ORDER

In recent years, manufacturers have engineered new equipment utilizing the hermetically sealed plated crystal (HC6/U). This crystal is either gold or silver plated, the plating acting as electrodes. These crystals should be used in circuits designed for them as the maximum current capacity is 10 milliwatts (5 milliwatts for overtone type). High stability of frequency is a characteristic of this crystal. All TEXAS CRYSTALS are made to conform with military specifications. When ordering for G. E.,

PAMOTOR

Miniature Axial Fans for High-Reliability Applications

Miniature axial fans offer features that surpass all similar devices in construction, performance, and reliability. These miniature cooling devices have a wide range of applications in electronic gear and equipment such as computers, instrumentation equipment, industrial and military communication apparatus, military ground support systems, mobile radio gear, and maintenance equipment, power supplies, data processing equipment, video tape recorders, entertainment electronic equipment, etc. Pamotor fans are equally-suited for use in X-ray and other heat-generating equipment which require ultra-reliable cooling. Every Pamotor fan incorporates the following construction features (most of which cannot be found in other fans), assuring maximum dependability at reasonable cost.

DESIGN: Inside-outside rotating motor design yields higher torque capacity. Flywheel effect produces constant, quiet fan speed. Exceptionally close tolerances maintained for air gap result in maximum efficiency. Available in both induction and shaded-pole types.

BEARING SYSTEM: New bearing system designed for permanent lubrication. Large surface sinter-metal sleeve-bearings individually handle radial load, plus thrust ball bearing with felt oil reservoirs for lubrication.

MOUNTING: Can be mounted and operated in any position without loss of performance.

BALANCE: Rotor is accurately, dynamically balanced. Stator windings for induction type motor are uniform, allowing for minimum magnetic field density within the air gap.

HOUSING: Precision die cast housings insure accurate overall dimensions plus uniformity of quality. Rugged metal construction withstands physical damage in handling and installation. Warp-free materials are corrosion resistant and will not expand or contract in extreme temperature variations.

PERFORMANCE: Designed and precision manufactured for extra-long life with minimum cost of maintenance.

SPECIFICATIONS: All electrical materials are Class E, allowing extra margin of safety for operating in the higher ambient temperature range. Qualified environmentally to Specification MIL-T-5422E.

WARRANTY: Motor guaranteed against defects in workmanship and material for period of one year.

ALL-NYLON FASTENINGS

Zytel 101 per MIL P 20693 Spec, MIL S 7742 Spec
Birnbach All-Nylon Fastenings are made of Zytel 101, a Polyamide plastic of the Nylon 6.6 Type. They offer outstanding insulating properties plus resistance to heat, shock, vibration and chemical solvents plus high strength and superior torque strength. In most cases, because of their high dielectric strength, they eliminate the need of bushings, washers or other insulation. They are corrosion resistant, non-magnetic and good torque strength thru a wide temperature range. Continuous service temperature to 300°F (150°C). Stock color: Natural. Additional colors available to order. Zytel 101 per MIL-P-17019B.

BIRNBACH NYLON BUSHINGS AND SPACERS

Designed with wide flanges to completely isolate screw from mounting surface, useful where hi tensile and torque requirements require high strength non-insulating screws. Natural color.

Model 153—A Combination

SIGNAL GENERATOR and SIGNAL TRACER

The true test of the claim "two instruments in one" is: can each of the two units be used separately as well as in conjunction with each other? In the case of this versatile combination instrument, the answer is emphatically yes, for, the Signal Generator will function as a full service instrument with a range of 250 Kilocycles to 120 Megacycles and the Signal Tracer will follow any signal whether generated by a broadcasting station or injected by the

Signal Generator section of Model 153. When used in combination with no dependence on outside signals, compatibility of Model 153 provides ideal service, unlike any standard signal tracer, the Model 153 injects its own signal then traces that controllable signal to locate the source of trouble whether due to component or circuit by standard signal tracing technique.

SPECIFICATIONS:

SIGNAL TRACER: • Hi-gain cascade pre-amplifier. • Pre-amplifier output available at front panel jacks for use with VTVM, oscilloscope or phones. • Low distortion triode output stage. • Audio Attenuator provided to prevent high signal overloading. • 4½ inch permanent magnet speaker. • Separate R.F. and Audio Signal tracing probes. • **SIGNAL GENERATOR** • Covers from 250 KC to 120 MC in

TEST ALL TRANSISTORS . . . ANY TYPE WITHOUT EXCEPTION . . . AND ALL . . . TRANSISTOR OPERATED DEVICES

With New Model 158 TRANSISTOR RADIO TESTER

SEE Read the relative gain and leakage of any transistor directly on the meter.

HEAR All audio stage signals through the front panel speaker

Simplified procedure —

Model 158 ① Injects a signal ② Follows the injected signal through each and every stage including all transistors!

Specifications:

TESTING TRANSISTORS WITH MODEL 158

The Model 158 will test all transistors including NPN and PNP, Silicon and Germanium types, without referring to characteristic data sheets. The time-saving advantage of this method is self-evident. A further benefit of this service is that it will enable you to test new transistors as they are released, since no characteristic sheets are required.

TESTING TRANSISTOR RADIOS AND OTHER TRANSISTOR DEVICES WITH MODEL 158

An R.F. signal source modulated by an audio tone is injected into the transistor radio from the antenna through the R.F. stage past the mixer into the I.F. amplifier and detector stages and on to the audio amplifier. This injected signal is followed and traced through the receiver by means of the signal tracing section incorporated in the Model 158. The injected signal is heard on the front panel speaker as it is followed through the various stages.

Model 159 TESTS AND REJUVENATES

ALL PICTURE TUBES

ALL BLACK AND WHITE TUBES . . .

From 50 degree to 110 degree types — from 8" to 30" types.

ALL COLOR TUBES . . .

Test All picture tubes — in the carton — out of the carton — in the set!

Specifications:

Provides separate filament operating voltages for the older 6.3 types and the newer 8.4 types. Properly tests the red, green and blue sections of color tubes individually — for each section of a color tube contains its own filament, plate, grid and cathode.

Detects tubes which are apparently good but require rejuvenation. Such tubes will provide a picture seemingly good but lacking in proper definition, contrast and focus.

Rejuvenation: Model 159 applies a selective low voltage uniformly to assure increased life with no danger of cathode damage.

Model 159 comes housed in a beautiful portable carrying case. Complete with sockets for black and white tubes and color tubes. Net price **\$2995**

CDE resistance decade boxes feature construction very similar to the type CD-capacitance decades described above. Resistors used in these decades are of relatively high wattage rating for maximum versatility.

Range selection is made by two rotary type selector switches in each decade. Like CDE capacitance decades, the resistance decades feature a custom chart permanently attached to each decade box.

"HANDICHECK" IN-CIRCUIT CAPACITOR TESTER

The BF-90 is designed to detect open, shorted or intermittent capacitors without removing the faulted capacitor from the circuit. Indication of capacitor condition is given by a tuning eye which opens, closes, or flutters depending on capacitor condition. The BF-90 will indicate condition of capacitors from 30 pf. to .1 mfd. with as little as 50 ohms in parallel and from .1 mfd. to 2000 mfd. with as little as 1 ohm in parallel. The capacitor tester is designed for operation on 110-125V AC, 50 or 60 cycles. It is supplied in a portable metal case with dark brown wrinkle finish. Case dimensions are 5½" deep x 7" high and 10" wide. Weight of the unit is 6 lbs. 12 oz.

CAPACITOR RESISTOR BRIDGE

The type BF-60 bridge is designed to measure the most important capacitor and resistor characteristics. The Wein bridge used an electron "eye" for bridge null indications. The bridge will measure resistance and capacitance as well as detect defects such as shorts, opens, intermittents, high leakage and power factor and low insulation resistance. The bridge measures capacitance from 10 pf. to 1000 mfd. in four ranges; resistance from 1000 ohms to 5 meg-ohms in two ranges; and power factor to 50% at 60 cycles. Five fixed DC polarizing voltages are provided. AC power requirements are 110-125V AC, 50 or 60 cycles. Case is dark brown wrinkle finish, 5½" deep x 7" high x 10" wide. Weight is 8 lbs. 4 oz.

CAPACITANCE-RESISTANCE ANALYZER

The BF-71A capacitance-resistance analyzer performs functions comparable to units many times the price. The unit is a versatile addition to any service shop or laboratory. The BF-71A uses Wein bridge circuitry with an electron "eye" for null indication. It measures capacitance values from 10 pf. to 2000 mfd. in four ranges with an accuracy of ±3%. Bridge measurement voltage is .5 volts rms. Resistance measurements are from 2.5 ohms to 25 meg-ohms in three ranges; current measurements, from 2 microamps to 100 milliamps in three ranges; voltage, to 500 volts DC in three ranges; and power factor measurement, from 0 to 50%. The unit measures leakage current by meter and insulation resistance by indicator or calculation. The 3½" multi-scale meter has a sensitivity of 10,000 ohms per volt with an accuracy of 2% of full scale. The internal power supply is continuously variable from 0 to 500 volts DC, 35 milliamps maximum. The BF-71A is supplied in a portable metal case finished in dark brown wrinkle enamel. Dimensions are 11" high x 10" wide x 6½" deep. Weight is 14 lbs. Power requirements are 110-125 v AC, 50 or 60 cycles.

GIVES YOU A 3-IN-1 ELECTRICAL TEST LABORATORY

Satisfaction Unconditionally Guaranteed

DON'T SEND A MAN TO DO A BOY'S JOB!

Are the technicians in your laboratories and shops using expensive meters and instruments for sample continuity and voltage checks? Speed up production through the use of the tool specifically designed for this application. A meter should be used only when the value of voltage, resistance or current must be known. Under any other conditions a Circuitracer will provide the required information faster and easier than expensive, bulky meters.

CIRCUIT TESTING WITH A CIRCUITRACER IS FASTER because the signal light is in the tip at the point of contact. This makes it possible to determine the existence of a circuit or voltage without removing the eyes from the test point to read a meter.

SAVE METER REPAIR MONEY BY USING DESCO CIRCUITRACERS. An overvoltage across a meter usually results in extensive damage which takes the meter out of service until repaired or replaced. The worst that can happen to your Circuitracer is a burned out lamp that can be replaced by the operator in less than a minute. Total cost, ten or fifteen cents for the lamp!

The **CIRCUITRACER** is the only electrical tester (other than expensive meters) that can test dead circuits, low voltage live circuits **AND** high voltage live circuits. It is made of the finest materials available and is designed for long life.

DESCO TEST PROBE ADAPTERS

INSURE CONNECTOR RELIABILITY

Manual probing of harness connectors while circuit testing can damage connectors and impair reliability. Desco Test Probe Adapters were developed to provide a test fitting identical to the pins and sockets in the connectors being tested. They make the same electrical and mechanical contact as the mating connector, and insure against scratching, bending and warping.

The adapters are made in three sizes to fit connectors using #12, #16 and #20 wire gauges. The sockets are gold plated copper with a brass sheath which retains a beryllium copper spring. The pins are stainless steel to insure long life. All are made to rigid MIL-SPECS. The adapters will fit Desco Jumper Wires and the Desco Circuitracer® Tester interchangeably.

Several aircraft and missile manufacturers specify Desco Test Probe Adapters for most manual test connections. (names on request)

NON-DESTRUCTIVE D.C. VOLTAGE BREAKDOWN EQUIPMENT

Freed can supply non-destructive voltage breakdown testers for applications where the d.c. test voltage must be removed within microseconds in the event of a breakdown. Simultaneously the component under test is short circuited to prevent it from being damaged by its own capacitive charge.

The instrument contains a variable slope ramp generator to apply the test voltage in applications where the capacitive current in the test sample exceeds the preset leakage current limit. An indicating voltmeter holds the reading of the breakdown voltage until reset.

Type	Leakage Current	Test Voltage	Output Accuracy	Power Requirements	Size and Weight
1625	10, 100 & 500 microamperes	*2500 volts d.c.	±5%	105-125 volts 50-60 cycles	19" x 8¾" 25 lbs.

*Other test voltages available. Write for specifications.

LOW FREQUENCY "Q" INDICATORS

Direct indication of "Q" at low frequencies, inductance, distributed capacity, impedance and dielectric loss can also be measured. Instrument may be used to study the magnetic properties of iron core material for stability as a function of applied voltage and losses as a function of the frequency.

Two units are available, the 1030-A indicates "Q" as a product of meter readings multiplied by dial settings, the 1030-B displays "Q" directly in digital readout.

Type	Test Frequency	Q Range	Accuracy	Test Voltage	Power Requirements	Dimensions and Weight
1030-A	20 cycles to 200 K.C.	1-1000	±5% 20 cycles to 50 KC— to 200 KC at reduced accuracy	Voltage to series circuit, 6.01 to 10 volts voltage across coil variable to 100 volts	105-125 volts 50-60 cycles	21" x 23" x 15" 120 lbs.

PRECISE VOLTAGE STANDARDS

Use these convenient reference standards for direct calibration of voltmeters, or use as a null type voltmeter by simple addition of a galvanometer. Each VZA STANDARD has twenty taps arranged in two rows. The bottom row is exactly 1/10 the voltage drop of the top row. Type VZ STANDARDS have just one known voltage (without taps), resulting in cost savings and is used for standard cell replacement. Precise Voltage Standards have several advantages over chemical cells, since they are completely solid state and can take voltage and current overloading without loss of accuracy. May be powered from batteries, external power packs or purchased complete with built in power source. Several standards may be wired in series for higher voltages or finer adjustment. All reference standards listed have 1% accuracy. Higher accuracy types with 0.1%, 0.01% and 0.001% available at higher cost.

25 YEARS OF INTEGRITY IN MANUFACTURING
J-B-T INSTRUMENTS, INC. NEW HAVEN 8, CONN.

VIBRATING REED FREQUENCY METERS (PATENTED)

• **USES** — J-B-T Vibrating Reed Frequency Meters are used extensively in radio, telephone, and television service, on engine generator sets, in laboratories, in many types of electronic equipment, on panel and control boards, in inspection set-ups—wherever constant or known frequency is important to efficient operation of equipment. More than 20 years of continuous experience covering many thousands of these instruments are your assurance of quality for both commercial and defense applications.

• **OPERATING PRINCIPLE** — The patented, simplified design used in the J-B-T meter operates on AC or interrupted DC. Each reed is adjusted to respond by resonance to but one frequency. As the current excites the driving coil, the reed "in tune" with the frequency in the coil will respond by vibrating rapidly because of permanent magnet polarization and induced magnetism from the coil. The instrument is adapted to specified operating voltage by a series resistor. To determine frequency, simply read the reed.

• **RESPONSE PATTERNS** — These patterns differ with the increments of frequency between reeds. For example, at 60 cycles, half-cycle steps give the broad response shown below at left, whereas full cycle steps bring the sharp response at right. In general, the lower the frequency the greater the amplitude, the higher the frequency the less the amplitude. Thus a 12 cycle reed normally will have substantially greater amplitude than a 1000 cycle reed.

• **ADVANTAGES** — Guaranteed accuracy at reference temperatures of 77°F is $\pm 0.3\%$ or better of the AC frequency being measured, unless otherwise stated. Accuracy on interrupted DC may be somewhat less. High fatigue safety factor for continuous operation. Temperature compensations are not required as temperature coefficient of reeds is only approximately 75 parts per million per degree F, negative.

• **STABILITY** — All meters are permanently calibrated at the factory and do not require subsequent adjustment. J-B-T reeds have relatively high Q characteristics, an especially desirable factor in electronic circuits. Wave form or external fields do not ordinarily have an adverse effect. Built with no pivoted parts and with lock washers at every critical point, these rugged meters can take rougher treatment than many instruments.

• **TRUST THE METER** — If a meter plugged in on a 60-cycle AC power line does not indicate exactly 60 cycles, trust the meter! Power supply may momentarily be off-frequency due to changing load conditions. All J-B-T Frequency Meters are meticulously calibrated at the factory, entirely independent of frequency of power supply. Production and inspection equipment are checked regularly against National Bureau of Standards frequency signals.

Advanced design offers 21 reed interchangeable 3 1/4" panel with 2-cycle intervals for close ing over the band of 380 to 420 per second. Accuracy $\pm 0.3\%$ reference temperature. The reed is necessarily smaller than in a 400-cycle meter, such as the 33-FX, but the 21 reeds are located in an enlarged window 2" wide flags 3/8" high x 3/4" wide to give gum readability. A patented construction for mounting the reeds one clamp assures ruggedness. Instruments and their variations particularly useful where usual close indication of frequency throughout the band is desirable. See Table of Dimensions, line 5. X, 5 reeds, 380-420 cy., 100-130 volts (normally stocked)	\$39.80

1 1/2" SEALED METERS

15-FHAC. Widely used as the standard on audio-oscillators, the illustrated operates 2 reeds, 60 and 400 at approximately 8-10 volts on 0.04 for a cathode follower circuit. Accuracy at 77°F. Steel case has telescopic finish, solder terminals. Barrel diameter, 2-3/32" detachable flange covers glass-to-metal seal. See Table of dimensions, line 1

METERS (lower photo) also use the back metal case with 2-3/32" detachable and glass-to-metal seal. The 15-series features 5 reeds in a row for volt operation. Specified where size might be important. Same 100% inspection approx. 57,000 ft. altitude as PHXX Standard meters, but not regularly. See Table of Dimensions, line 1.

RUGGEDIZED AND ILLUMINATED METERS

With "RUG"—Sealed vibrating reed frequency meters and sealed diode line meters are available, when so ordered, to the intent of MIL-M-10304B, which covers ruggedization of other kinds of meters. Feature usually is specified only for extra-severe shock and on.

Instruction—Requirements for lighted meter dials have led to illustrating the 3 1/2" PHXX Series of sealed meters. Light from a source in the panel is admitted through a sealed window built into the case. Inquiries are invited.

100 CYCLES, IN 1 CYCLE STEPS; 800 CYCLES

The variations which J-B-T produces on special order, are 21-reed, 100 cycles in 1/2" case; and 11-reed, 780-820 cycles with 5-cycle increments. Quotations on request.

NOTE ON METER VOLTAGE

J-B-T Vibrating Reed Frequency Meters of all sizes normally are made with two studs and are designed to be connected across one phase of a multi-phase line. The single phase voltage where the meter will be used thus becomes the voltage to be specified for the meter. Special meters with extra studs are made for the purpose of using at two or more voltages, not additional phases.

ELAPSED TIME METERS; FREQUENCY-TIME METERS; REED RELAYS AND OSCILLATOR CONTROLS

• USES AND ADVANTAGES OF ELAPSED (OR RUNNING) TIME METERS

To record operating time of AC electrical and electronic equipment, these self-starting synchronous instruments normally register in 1/10th hour steps to 9,999.9 or 99,999.9 hours, then automatically reset. They are widely used for tube life, TV equipment, punch presses, conveyors, oil burners, ground support equipment, maintenance schedules, etc. J-B-T engineers recommend the AC type of elapsed time meter for superior accuracy, especially where voltage or ambient temperature vary widely.

6-Digit WIDE-NUMERAL ELAPSED TIME METERS

MODEL 31-EXW. The latest J-B-T elapsed time meter is Model 31-EXW, illustrated. Easily-read, wide 6-digit numerals register to 99,999.9 hours then automatically reset. Distinctive contemporary dial shows tenths in black on white, and units in white on black. The 3 1/2" black molded case is interchangeable with Model 31-EX and FX types of frequency meters. Print SK-125 gives mounting information.

Model 31-EXW, 6-digits, 0-99,999.9 hours, 60 cy., 110-125 volts. \$16.95

SQUARE-CASED ELAPSED TIME METERS

MODEL 31-ES. A square black molded case, matching other 3" x 3" meters, differentiates this model from the round 31-EX. Ask for Print SK-110, Rev. F showing standard rear mounting 2 1/4" bet. centers of molded-in studs, new rugged case with overall depth 3-11/32" behind flange, and electrical studs on center line. Variations can be made for 99,999 hours (suffix U), 230 volts, minutes, matte finish, or 50 cycles.

31-ES, '60 cy., 110-125 volts, 0-9,999.9 hours. \$17.05

3 1/2" SEALED ELAPSED TIME METERS — 60 Cycles

MODEL 31-EHXX. Where rugged requirements make a completely sealed elapsed time meter desirable, this glass-to-metal construction with flat glass front and 3 1/2" diameter separable flange, often is specified. Heavy-duty solder terminals are supplied. Every instrument is checked in a vacuum chamber. Overall dimensions and appearances match the FHXX series sealed frequency meters. Maximum voltage between terminals and case, 1,000 volts, R.M.S. The meter registers in 1/10 hour steps to 9,999.9 hours, then automatically resets. Tenths indicator is red on white, all others in white on black. Mount according to SK-85, Rev. C.

31-EHXX, 60 cy., 110-125 volts. \$19.75

3 1/2" SEALED ELAPSED TIME METERS — 400 Cycles

MODEL 33-EHXX. This stable, self-starting 400-cycle elapsed time meter is extensively used for preventive maintenance and for reliability testing and checking in a wide variety of equipment. The instrument is entirely enclosed in a 3 1/2" flanged case, glass-to-metal sealed construction with separable flange; heavy-duty solder terminals, flat glass front, 1/10 hours are shown in red on white, all other numerals white on black. The external appearance matches FHXX frequency meter series. For dimensional details see SK-61, Rev. B.

33-EHXX, 400 cy., 0-9,999.9 hours, 1/10 hour steps, 110-125 volts. \$58.00

2 1/2" SEALED ELAPSED TIME METERS

MODEL 21-EHXX. A full size counter reading 9,999.9 hours in 1/10 hour steps and a rugged self-starting synchronous motor are built into this 2 1/2" sealed meter. Its front mounting dimensions are the same as Type MR26 electrical indicating instruments in MIL-M-6B. Glass-to-metal seal makes the instrument completely tamper-proof. Ask for Print SK-68, Rev. G. (2 1/2" 400-cycle meter, Model 23-EHXX also is made on special order.)

21-EHXX, 60 cy., 110-125 volts. \$26.00

Popular BASIC 3 1/2" ELAPSED TIME METERS

MODEL 31-EX. First in popularity among all J-B-T elapsed time meters, this self-starting instrument registers to 9,999.9 hours in 1/10 hour steps before automatically resetting. Red numerals on white are used for tenths, all others are white on black. Black molded case matches FX series 3 1/2" frequency meters and completely encloses all parts. This case, with centered terminals, meets type MR34 for MR35 mounting dimensions of MIL-M-6B, also JAN-1-6. Referring to line 5 of the Table of Dimensions on the preceding page, barrel depth (B) is 2 1/2", stud height above center (G) is zero, and all other measurements are as shown. Types for 99,999 hours, or 50 cycles, or special voltages are available on special order.

RUGGEDIZED METERS TO MIL-M-7793C

This specialized specification at present omits the popular 3 1/2" sealed sizes. J-B-T 2 1/2" and 3 1/2" round sealed and ruggedized types can be certified as to various test conditions under present MIL-M-7793C and General Meter Specification MIL-M-10304B. Inquiries are invited on smaller sizes to MIL-M-7793C and subsequent revisions as they are released.

ELAPSED TIME — FREQUENCY METERS

31-FE SERIES. To conserve panel space and centralize information, this panel instrument combines elapsed time or running time meter with frequency reads. It is used on motor generator sets and on electrical equipment where maintenance routine calls for periodic servicing. The J-B-T design, proved by years of field experience, uses a separate exciting coil for the reeds to achieve close control of reed amplitude and frequency. Reads 0-9,999.9 hours and 58-62 cy. with 5 reads, for 100-130 volt operation; self starting. Tenths shown in red on white, all other numerals in white on black. Black metal case with front mounting per Table of Dimensions, line 6. Power consumption is 4.7 watts. For variations having 7, 9, or 11 reads, regularly stocked, such as Model 34-FE, see print SK-45, Rev. D.

31-FE, 3 1/2" metal case 4-19/32" deep, \$19.75

DYNAMIC OUTPUT PRINCIPLE - A sensational new improvement on the time tested Jackson Dynamic Principle. In the Dynamic Output test, variable DC bias voltage, plus variable AC signal voltage are applied to the control grid. Variable DC voltage is applied to plate and screen. The metering circuit, a low impedance bridge type then reads only the AC component of the plate current. Obviously this is the most valid kind of test for amplifiers, it considers the entire output curve of the tube, not just a small portion.

PARAGON® PRO-GLO® CIRCUIT TESTER

A simple,
inexpensive
instrument
for quick
checking of
non-energized
circuits

Consists simply of plastic case containing a battery and lamp, a pointed probe and 3-foot lead wire with alligator clip. In use, clip is connected to ground or common circuit point and probe is touched to various other circuit points. When resistance is less than 1 ohm, lamp glows brightly in translucent case. On open or high resistance circuits, no glow appears, and if continuity is poor, lamp glows dimly.

Signal light at point of contact eliminates necessity for shifting eyes to read meter, increases

speed and accuracy in point-to-point testing avoids distractions from buzzers of nearby workers. Inexpensive enough to be distributed to each person who checks circuits.

To assure long life and reliability, probe and battery contact spring are tin-plated beryllium copper, case is high-impact plastic, and wire is heavy-duty, highly flexible test lead. Uses standard size AA penlight battery and #112 lamp. Model CT-1.

TO-6 TEL-OHMIKE® CAPACITOR ANALYZER

TO-6 TEL-OHMIKE capacitor analyzer is a must for checking all capacitors. It is a moderately priced instrument with laboratory quality and accuracy—the highest accuracy of any instrument of its type available to the service trade!

CAPACITANCE BRIDGE measures up to 2000 μF . Five overlapping ranges include exclusive 1 pF to 100 pF range. Special shielded transformer for bridge voltage. Extremely low AC voltage; 1.35 volts for electrolytic capacitors, 2.85 for all others, permits safe testing of all low voltage capacitors.

INSULATION RESISTANCE of papers, ceramics and micas easily read on large meter. No guessing with neon lamps. Full range—to 10K Ω @ 30V for low voltage units . . . to 10M Ω @ 150V for higher voltage components. Fast charge feature speeds testing of high capacitance units.

- **LEAKAGE CURRENT** of electrolytics measured directly on meter. Four ranges; .06, .6, 6, and 60mA. Three ranges of DC voltage (continuously variable within each range) permit testing capacitors at exact rated voltage up to 600 volts.
- **POWER FACTOR** of electrolytics, up to 50% measured by Wien Bridge.
- **METER PROTECTOR** of solid-state design allows severe accidental over-loads without burn-outs.
- **MAGIC-EYE TUBE** simplifies bridge balancing for capacitance and power factor measurements. High gain amplifier provides greatly improved sensitivity.
- **PUSH-BUTTONS** color-keyed for instant range selection.
- **MODERN CASE:** Silver-grey hammertone finish, panel is charcoal grey with highly contrasting white designations. Measures 8 7/8" high, 14 3/4" wide, 6 1/8" deep. Weight only 13 pounds.

TCA-1 TRANSFARAD®

Transfarad is specifically designed to safely test low-voltage, low-leakage aluminum, tantalum, paper, and ceramic capacitors used in transistor circuits. A must for modern industrial laboratories and electronic service shops.

SAFELY TESTS TRANSISTOR CIRCUIT CAPACITORS INCLUDING TANTALUM TYPES

Only analyzer which gives the complete story on tantalum and other low voltage current capacitors.

CAPACITANCE BRIDGE measures 1 μF to 2000 μF in five overlapping ranges. Only 0.5 volt is applied to the bridge from a continuously adjustable AC supply. The voltage across the capacitor is less than this applied voltage, the amplitude depending on the capacitance being measured. No possibility of overheating or deforming any low voltage capacitor during measurements.

- **INSULATION RESISTANCE** directly read from 50 megohms to 20,000 megohms. Only 25v d-c is applied, permitting measurements on low voltage ceramic, mica, and film capacitors. IR of ceramics rated below 25v may be calculated from leakage current measurement at exact rated voltage.
- **LEAKAGE CURRENT** measured directly on meter at exact rated d-c voltage of capacitor. Sensitive circuit makes full scale measurements from 0.6 μA to 600 μA in seven ranges.
- **POWER FACTOR** measured by Wien bridge from 0 to 50 per cent.
- **MAGIC EYE** null detector in high-gain amplifier has sensitivity control permitting accurate measurement of small capacitors.
- **SHORT-TIME STABILITY** is assured by dual regulation of the power supply. Specially processed etched circuits and complete encapsulation of the critical bridge-null amplifier insure long-time stability.
- **BINDING POSTS** are shielded against strays, assuring greater accuracy during low capacitance measurements.
- **FOR SAFETY** the capacitor under test is automatically discharged after testing. Three wire line cord grounds instrument case.
- **OPERATING PROCEDURES** are clearly shown on convenient pull-out slide.

Simpson VU meters meet all the Electrical and Ballistic specifications established by Bell Laboratories and American Standards Association as required by broadcasting, communication and sound engineers. They are available with either Type A or B scales. Type A scale stresses the level in VU for monitoring wire lines. Type B scale stresses per cent use of transmitter output and is the standard for broadcast service.

SEGMENTAL VOLTMETERS — "Rugged Seal" Construction

The significant portion of the overall voltage scale of these meters is expanded to occupy the full scale length. In addition to the stock expansions and accuracies shown, special segmental voltmeters can be built on order.

Meters are completely sealed and commercially ruggedized; metal cased and shielded; and are not affected by mounting on steel panels. Movement is external magnet type shielded by the metal case.

Accuracies shown are in percent of center scale value.

All of these AC segmental voltmeters are the RMS sensing type which are preferred when working with distorted waveforms.

Volt-Ohm-Milliammeter

1. One selector switch minimizes chance of incorrect setting and burn-out. 2. 5,000 ohms per volt AC sensitivity; 20,000 DC. 3. Four resistance ranges to 100 megohms. Outstanding resistance ranges: low reading .1 ohm, high 100 megs. Fuse affords protection to the resistors in the ohmmeter circuit, especially the X1 setting. Spring-backed instrument jewels for ruggedness. Accuracy 2% DC, 3% AC.

RANGES

DC Volts: 0-3-12-60-300-1,200-6,000 at 20,000 ohms per volt.
AC Volts: 0-3-12-60-300-1,200-6,000 at 5,000 ohms per volt.
Ohms: 0-1,000-10,000.

Volt-Ohm-Milliammeter

A laboratory type V-O-M with 1/2% resistors for greater accuracy. Long range scale to eliminate parallax. Ranges and other features as described for Model 630, above. Accuracy 1 1/2% DC, 3% AC.

Combination V-O-M and VTVM

1. One selector switch. 2. Complete V-O-M in combination with battery operated VTVM. 3. 11 megohm input to VTVM.

Two fundamental units at the price of a single tester; VTVM stability assured by long life battery operation.

Sensitivity plus—sensitivity of the 1.2 volt (VTVM) range is equal to over nine million ohms per volt. Usable with frequencies through 500 Kc.

Large meter easy to read; unbreakable meter face.

Spring-backed instrument jewels for ruggedness. Accuracy 3% DC, 4% AC, VTVM 4%.

Volt-Ohm-Milliammeter

1. 200,000 ohms per volt DC for greater accuracy on high resistance circuits. 20,000 ohms per volt AC. 2. Suspension Meter Movement. No pivots, no bearings, no hairsprings; no rolling friction. Extremely rugged. Greater sensitivity and repeatability. 3. 62 ranges. Temperature and frequency compensated. The unit is precision designed to give maximum coverage, to withstand accidental overloads and to offer greater reading accuracy. Special precision resistors rigidly mounted and directly connected to the switch to form a simplified unit. Usable with frequencies through 100 Kc. UNIMETERS

An innovation in self-service meters these Select-Your-Range Unimeters consist of two basic meter movements, which can be combined with any one of a number of separate dial-component units for a wide variety of meter ranges. The basic meter movements and the Dial-Component units lock together simply; no soldering, no wiring, no opening of the dust-proof movement is required.

In two sizes, 327-U 3½" rectangular and 420-U 4½" rectangular with mirror scale for greater accuracy in reading. Also in handy kits, both sizes, as below. The triple-purpose kit case with handle provides handy portability; easy protective storage and attractive display.

RUGGEDIZED INSTRUMENTS

A complete line of 2½" and 3½" ruggedized and sealed Instruments designed to meet government specifications MIL-M-10304B.

Triplet ruggedized instruments employ the unique and exclusive bar-ring construction so well adapted to ruggedized meters that the addition of spring loaded jewels and an internal rubber mount (both designed for jewel protection) causes the essential difference between the commercial and ruggedized movements.

The bar-ring construction is inherently self-shielding so that the heavy steel case does not affect instrument calibration nor does mounting in a steel panel of any thickness.

The unusually strong housing consists of a drawn steel case with heavy die cast window bezel. The bezel seals the window to the case with a simple gasket and screws. A tough plastic window is used instead of glass.

Husky gasket-sealed studs are used for electrical connections to provide additional protection over delicate glass types.

Most catalog ranges of DC: MV, Volts, Mic. Ma, Amp and AC rectifier type can be supplied. Regular dials in accordance with MIL-M-10304A are supplied although special dials of all descriptions can be made up for special applications.

If space on your panel is at a premium here is a miniature meter that will fit into even the most restricted area—yet give you the readability, performance and reliability you expect from the conventional 2½" sizes.

Weighing only four ounces this meter also is of value to the user who has a weight limitation factor on his hands.

Accuracy—DC 2% of full scale; AC Rectifier type 5% of full scale.

Self-Shielded Bar-Ring Magnet—Not affected by magnetic panels. High torque, exceedingly rugged and accurate.

Mounting—Horizontal, zero at left and barrel down is standard.

Vertical mounting or other special adaptations in quantity orders.

Panel Hole Required—Only ⅞" x 1⅞".

WESTON INSTRUMENTS

1900 PANEL INSTRUMENT SERIES

GENERAL

The 1900 Series is an integrated line of a-c and d-c panel instruments, providing a carefully selected choice of sizes, case styles, accuracies, pointers, scales and ranges. Particular attention has been paid to designing instruments that will present an overall appearance of harmony, even when random sizes are mounted side by side. Mounting bezels provide three types of mounting—recess, flush and conventional.

One of the many features of this new Weston series is the method of construction which provides quick interchangeability of fronts and easy access for adjustment or service, if ever required. From their spring-backed jewels to their unique fastening clips, the 1900 Series incorporate the fine workmanship and quality that has always been associated with Weston.

...features

LOW COST. Outstanding performance is provided in a low cost instrument — providing digital readout.

ACCURACY. Warranted accuracy is maintained for all internal contributing factors and the listed external conditions.

(1) Ambient Temperature—60° to 115° F.

(2) Power Source—105 to 125 V—50 to 60 CPS.

READING AMBIGUITY. There is no ambiguity or reading (even for small changes) and no allowance need be made. Bi-directional voltage variations are followed with distracting backtracking.

RESOLUTION AND REPEATABILITY. The instrument can be easily read and is sensitive to small voltage changes. For short term observation, under stabilized ambient conditions unit will repeat and is easily read to .05% or less. Thus, for many applications, the instrument can be used to a comparative accuracy of .05% full scale.

CALIBRATION EASE. High input impedance permits direct calibration with Standard Cell.

Under normal usage, recalibration is required only at 6 month intervals.

RELIABILITY. High reliability is achieved by a silicon transistor amplifier and the absence of stepping switches and relays. Normal overloads or incorrect polarity will not damage instrument.

READING SPEED. Instrument comes to reading balance quickly and without annoying creep. Average reading time is approximately 2 seconds.

INPUT. A 3-terminal color coded input group is furnished whereby choice is provided: grounded or floating input. A jumper link is furnished so the either negative or positive side of the input can be grounded.

DECIMAL POINT. Decimal points are illuminated by a single, long life easy to replace bulb. The decimal point shifts with range selector.

OTHER USES. By use of compatible transducers, the Digitec can be used to display readings of current, pressure, speed, position, flow, angle or any parameter. Current adaptors are available to provide readings of from 1 μ A to 2 AMP.

READING RETENTION. A jack is located on the rear of the case to permit holding of a displayed voltage by means of an external switch. Suitable switches complete with cord and plug are available as optional accessories.

CARRYING HANDLE. For the portable models, the convenient carrying handle also serves to set the viewing angle for optimum readability.

Certificate of Accuracy furnished with each instrument (traceable to NBS)

CORRUGATED FEEDTHRU INSULATORS

The six new corrugated type feedthru insulators have more than twice the leakage path of the straight type because of increased surface of the corrugations and recommends itself where a straight side insulator of equal height is not satisfactory because of its shorter leakage path. Brass nickel plated hardware and cork mounting washers supplied.

INSULATED GLAS-LINE CABLE**

USE FOR DIRECTIONAL ARRAYS, BEAMS, RHOMBIC SYSTEMS, ETC.

This Birnbach non-metallic guy wire is not to be handled as regular wire. Do not twist around itself for solid joint; it must be knotted firmly in place (use bow line knot) — use coupling devices such as our Nos. 472, 473 or 474 insulators. Must not be abraded by constant friction — will wear and break line; avoid tight turns. An open thimble should be used to couple the Birnbach "Glas-Line" cable to an eye-bolt at mast or tree. Glass fibers conform to Mil 1140 Spec. and plastic jacket conforms to Mil-I-631C Spec.

*The breaking strength indicated is applicable when "Glas-Line" cable is properly used.

Polystyrene

ROD TUBING SHEET

For radio and electronic applications, because of its very low loss factor at ultra high frequencies, Polystyrene is the ideal material for insulators, coil forms, shields, etc. It has excellent arc resistance, is non-tracking and has splendid insulating properties. Because its water absorption is practically zero it has excellent dimensional stability.

SLO-SYN® Synchronous Motors

- INSTANT STARTING, STOPPING, REVERSING

- 72 RPM SHAFT SPEED WITHOUT GEARS

- CAN BE USED AS D-C STEPPING MOTORS

A SLO-SYN Synchronous Motor is a permanent magnet type a-c motor having instant start, stop and reverse characteristics and a basic shaft speed of 72 RPM with 60 cycles applied. Adaptable for use as a d-c stepping motor or incremental positioning device that can be stepped 200 times per revolution of the motor shaft. Compact and economical, has almost negligible overshoot, no ratchets or detents. A single-pole,

three-position switch can give complete forward, reverse "off" control because the motor has three leads only. Stops or starts in less than 0.025 second or approximately 1.5 cycles. No need for mechanical or electrical braking; stops in less than 5° of motor shaft rotation. Starting and operating torques are nearly identical; no excessive inrush current when motor is turned on. All types have lubricated-for-life bearings.

Miniature Photoelectric Scanner Heads and Controls

Page 3

E8LP11G Scanner Head

Dotted line represents path of reflection—not the light beam

reflective surface

E8LP11G Scanner Head for specular reflective control. Responds to ordinary reflective surface and light beam must be directed perpendicular to the reflective surface for light to bounce back and strike the light sensing cell.

E8S11G Scanner Head

Dotted line represents path of reflection—not the light beam

retro-reflective surface

E8S11G Coaxial Scanner responds to retro-reflective surface (tape, chalk, ink, paint, etc.). Light beam need not be perpendicular to the surface; with an angle of incidence up to 45° and more light bounces straight back to the source.

E8LP11G Miniature Scanner Head

For high speed scanning service in minimum space. E8LP11G Scanner Head combines the fast acting cadmium selenide cell and the light source lamp in a single miniature housing (approximately $\frac{3}{8}$ inch in all three dimensions plus $\frac{1}{8}$ inch male pipe thread connection. See dimensional diagram below.)

The light sensing element is a fast response, cadmium selenide cell. The lamp has a built-in lens. An infrared filter helps protect against ambient light. The lamp rating is 2.5 volts at .5 amperes-life expectancy up to 75,000 hours depending on operating voltage.

Unique Design—Rugged Construction

- A. Housing (1) is precision machined from bar aluminum for ruggedness and stability. In production quantities can be furnished in specified colors.
- B. Removing a ring nut (2) releases capsule (3) containing cadmium selenide cell and light source lamp.
- C. Removing two screws from capsule (not visible in photo) permits replacement of cell and lamp.
- D. Polarized design assures correct position on four spring loaded contacts (4) when capsule is inserted in the head.
- E. 6-foot cable is factory-connected to terminals in housing.
- F. Cable, terminal connections and contact base are encapsulated in the housing with epoxy resin.

C-Series Impulse Actuated Photoelectric Timing Controls

Series Controls are triggered (ENERGIZED) by electric impulses. e-Energizing is controlled by adjustable time delay—the relay remains energized through the timing period for which the control is t. DARK-energized Controls time out with LIGHT; LIGHT-energized Controls time out with DARK.

When the "ENERGIZING" light change occurs before the timing period expires the relay remains energized through another complete timing period.

Quick "Light Change" is required. Objects should travel at near 60 feet per minute (unless specified). Timing repeat accuracy, 1%. Power consumption, 20 watts.

Rate Relay: SPDT contacts rated 15 ampere at 115 VAC, non-inductive load.

MODEL 9000 SERIES—the Master Control System. Consists of Model 9000-S Master Control Panel and can supervise ONE to FOUR Fotoelectric (detection) Sets. Contains Relays which energize alarm circuits. Control Panel installed remotely. Size: 7" x 10 1/4" x 4 3/4". For 110-120 v. 50/60 cy. ac.

On a separate circuit, the Master Control Panel will also supervise foil tape, door traps and window switch systems. Both circuits operate independently and simultaneously. Sounds continuous alarm (until reset) when either of these detection circuits is opened or wiring of Fotoelectric system is tampered with. Prevents false alarms should power fail or drop momentarily and resets automatically when power is restored. Also operates with any type electrical devices employed by professional burglar alarm companies.

Illustration shows FOUR Relay units plugged in to show plug-in location of 1, 2, 3 or 4 Relays as needed; one Relay for each Fotoelectric (detection) Set used. Model 9000-S Master Control Panel list priced "less Relays," as ONE Relay is automatically supplied with each Model No. 9000 series Fotoelectric Set ordered.

Designed for the computer-automation industries

Datalites are made in 2 basic styles: Lampholders with DIALCO'S own plug-in replaceable Lamp Cartridges, or with Built-in Neon Lamps. Shown above: Lampholder No. 7538 which accommodates either the No. 38- or the No. 39- cartridges. A similar, slightly longer Lampholder—No. 7545—accommodates the No. 45- cartridges. Single units mount in $\frac{3}{8}$ " clearance hole. Also available—twin-lamp assemblies which mount in $\frac{3}{8}$ " clearance hole... New long-life lamps are used in the plug-in cartridges. At most voltages, and for several current ratings, you may now specify 50,000 hour incandescent lamps. At higher voltages, where neon lamps may be used, 25,000 hour minimum may be attained with built-in resistors.

The T-1% INCANDESCENT LAMPS used in DIALCO Lamp Cartridges can be supplied in a wide range of voltages, including:

"Data Cap" Indicator Light Mount in $\frac{3}{8}$ " Clearance Hole

Series No. 250. Accommodates DIALCO'S own Lamp Cartridges—Cylindrical Incandescent, or Long Cylindrical Neon with or without resistor.

Features: (1) A rotatable read-out Cap Assembly with a cylindrical lens playing a hot-stamped legend (see below). (2) A Lampholder similar to 7538 shown at left... (3) Accommodates a clear (colorless) Lamp Cartridge out a legend.

Advantages: If lamp fails, the Cartridge may be quickly replaced from front of panel. Since the Cartridge requires no hot-stamping, down time costs are kept at a minimum. Lens Cap is of the screw-on type, spring-mounted and rotatable, thus insuring alignment of the legend at installation of the assembly. Choice of lens colors; solder cup, turret, or "53" terminals.

HOT STAMPED LEGENDS (Digits, Letters or Symbols)

SHORT and LONG CYLINDRICAL lenses can be hot-stamped with three digits of standard size, as follows:
1 DIGIT, $\frac{1}{16}$ " high (14 pt. type)
2 DIGITS, $\frac{1}{8}$ " high (10 pt. type)
3 DIGITS, $\frac{3}{16}$ " high (8 pt. type)
These standard sizes of Legends provided in a uniform manner per order—i.e., the size of type will be determined by the longest legend indicated in each individual order.

Standard—BLACK letters; but green, or blue letters can be supplied... Available—colored legends in black or gray lenses.

MULTIPLE INDICATORS in a Compact "Package"

Ready to install in a minimum of space

For Data-Processing Equipment, Computers, and Automation Applications
A Complete "Data Matrix" and "Data Strip" Manufacturing Service

To expedite installation of multiple-indicators, let DIALCO perform the following manufacturing services for you:

- Fabricate a "Data Matrix" or "Data Strip" panel to your specifications... Punch the necessary holes therein for DIALCO Lamp Holders and your fuses, switches, screws, etc.
- Mount the required number of Lamp Holders on the panel for vertical or horizontal reading... Lamp Holders can be spaced on any center-to-center measuring from $\frac{7}{16}$ " up. ($\frac{1}{2}$ " center-to-center spacing is standard, as shown on typical configurations illustrated)... There is no basic or stock item; we can supply from 2 to 40 Lamp Holders on a panel or strip.

- Insert required Lamp Cartridge into Lamp Holders.

- Hot Stamp or engrave legends on lenses (see above).

Lamp holders accommodate DIALCO'S Neon or Incandescent Lamp Cartridges (see above)... Each Lamp Holder has 2 Solder Cup terminals and is completely insulated (without the use of insulating shoulder washers); Turret, or AMP "53" Terminals can also be furnished.

MATERIALS AND FINISHES: Lamp Holder housing, panel or strip, and cartridge sleeve are aluminum with clear anodized finish... Option: black anodized finish or to specifications.

In these Oil-Tight Indicator Lights, a high degree of resistance to shock and vibration is achieved by the use of the rugged Neon lamps on 120 and 240 V.; and by choosing low voltage Incandescent lamps with short filaments, such as No. 44 or No. 1866 for circuits powered by transformers stepping down to 6.3 V.

Exclusive Features: Assemblies for use with NE-51 Neon Glow Lamps have "built-in" resistors—an exclusive Dialco feature (U.S. Pat. No. 2,421,321). Options include: binding screw, soldering or quick connect terminals. 7 lens colors are available; see bottom of page 1015 for method of specifying color.

OMNI-GLOW PILOT LIGHT

For use on instrument panels, appliances, switchboards, all electrical and electronic apparatus. OMNI-GLOW will last in excess of 10,000 to 25,000 hours of operating life.

With built-in glow lamp and current limiting resistor, all mechanical spring contacts are eliminated, providing a cost-saving, rugged unit relatively free from failure due to vibration or shock.

Easy mounting — only a $\frac{1}{2}$ " hole required for any panel thickness. Instant fastening — speed nut assures permanent shock and vibration-proof attachment.

Drawing less than 1/10 watt at 115 volts, long life, high reliability operation is provided over the 75-150 volt range; can also be used at higher voltage with decreased life.

Nylon body and acrylic lens assembly is $1\frac{1}{4}$ " long overall. Lens extends $\frac{1}{2}$ " in front of panel. Black plastic (105°C) leads are $4\frac{1}{2}$ " long, stripped and tinned $\frac{1}{2}$ ".

Four standard models have red (Model #1010A1), clear (Model #1010A2), amber (Model #1010A3), or white translucent (Model #1010A4) lenses.

Furnished complete with lamp and speed nut, OMNI-GLOW is UL approved—CSA Approval No. 13346.

SAFE-T-KLIP

(U. S. Patent 2,754,490)

New convenience and safety are realized through the use of 100% insulation on these test clips. Tough nylon insulation covers the entire clip, including the nose, without the bulkiness of rubber boots or insulating tape. Danger of short circuit due to clips touching each other or other components is eliminated, and test leads may be changed from one connection to another without cutting the power in the equipment.

Available in pairs (one red, one black) SAFE-T-KLIP incorporates a cadmium plated steel alligator clip and provides shock-proof, short-circuit proof operation in excess of 600 volts. Width of the clips is $\frac{3}{4}$ "; maximum height is $\frac{1}{2}$ ".

Six models are available. The #1410A is for use with a wire lead and provides either a soldered or screw terminal connection. The nylon sleeve is threaded to the clip for easy connection: Overall assembled length is $2\frac{3}{4}$ ". The #1410B, with overall length of $2\frac{1}{2}$ ", provides positive clip connection to all standard (.081 dia.) phone-tip test probes. The #1410C has a jack for standard banana plugs and an overall length of $2\frac{1}{4}$ ".

The 1410D is similar to 1410B except that the entrance hole is modified for Signal Corps. application.

MINI-VOLT VOLTMETER

(U.S. Pat. 2,644,134)

MINI-VOLT is an "abuse-proof" voltmeter, sufficiently accurate to indicate a 2 or 3 volt drop on 110 volt line. Virtually burn-out proof, this rugged unit is used by electricians, radio and TV repairmen, refrigerator and air conditioning servicemen, experimenters, lab technicians, handymen.

MINI-VOLT has wide application for all equipment whose proper operation requires correct voltage.

In addition to measuring the exact voltage over the range from 65 to 660 volts, Model #400B is used to identify AC or DC lines, check rectifiers, filter capacitors, chokes; test for blown fuses, grounded components, DC polarity measure voltage drops with load, and 1001 other uses.

For use on AC (any frequency) or DC, MINI-VOLT, with an impedance of approximately $\frac{1}{2}$ megohm, draws negligible current and can therefore provide dependable voltage readings even on circuits used in electronic apparatus.

Will provide a lifetime of service — glow lamp is guaranteed for 25,000 hours of actual operation. Furnished complete with extra-heavy insulated 12-in. flexible test leads and test probes.

Lightweight impact resistant case and dial panel, thoroughly insulated. Rugged that instrument can be thrown into tool box or dropped to floor without damage. C.S.A. approval #8910.

trip Sockets*

de of LEXAN®. Twelve sockets on either ½" or ¾" centers. Available with either common ground connection for all sockets or individual ground connection for each socket. Nickel-plated socket contacts, when used with nickel-plated indicator lamps, comply with Military Standard MS-33586 (Dissimilar Metals). Strip of 12 sockets is easily cut to provide any smaller number of sockets. Each strip includes three Tinnerman clips for mounting on a panel. Two clips are recommended for strips of two to five sockets; three clips for five to twelve sockets. If additional clips are required, C10464-012-27 should be used with the ¾" spacing; C11600-012-27 for ½" spacing. A standard AMP receptacle 040-1 may be used to make electrical connection to the sockets, or leads may be soldered to socket contacts. Receptacles available from AMP, Inc., Harrisburg, Pa.

Single Sockets*

Two types available: rectangular and round. Nickel-plated contacts comply with Military Standard MS-33586. By rotating the rectangular socket in the panel in which it is mounted, the same spacing dimension as the socket strip is maintained, whether it be the $\frac{1}{2}$ " or $\frac{3}{4}$ " centers. AMP receptacle 42040-1 may be used with the single socket. One Tinnerman clip, number C10464-012-27, is recommended for each single socket.

Color Caps

Two types of color caps available for coding of circuits: Profax and Pyrex hard glass. The Profax cap should be used with lamps rated below 1.5 watts. Heat generated by lamps of 1.5 watts or higher may discolor caps. A special Pyrex color cap is available for use with lamps above 1.5 watts. The Profax cap is desirable in applications in which aesthetic value and illumination of the cap is important.

Specially Designed for Operating Standard A.C. Dictating Machines, Record Players, Incandescent Lamps, Electric Razors, Electronic Test Equipment, and Other Small Electrical and Electronic Devices from D.C. Voltages in Automobiles, Buses, Trucks, Boats, Planes, Trains, and D.C. Districts.

ATR Portable Inverters are light-weight plug-in units for applications as recommended above. These Inverters feature instant starting, frequency stability, and high efficiency and reliability. Inverters have partial RF filtering which is only suitable for small insensitive type radios. For sensitive radio sets, ATR Universal Inverters, catalog sheet 657U, must be used. The 6 and 12-volt units are equipped with cigarette lighter cord set to plug into dash receptacle; whereas, the other higher input voltage units are equipped with standard two-blade plug-in cord sets. With ATR Inverters the need for special equipment is eliminated. They are designed for quiet, long-life operation. All ATR Models indicated are equipped with ATR plug-in Inverter Vibrators. Models RME and RMF come equipped with a four-point voltage regulator which makes possible the correct output voltage for minimum to maximum loads. The battery current consumption required is normally less than that drawn by one ordinary automobile headlight. The operating efficiency is approximately 75%. To figure battery current consumption see catalog sheet 657U. These Inverters are recommended only for use with loads having power factors in excess of 80% and should be used only for the applications as outlined above and on the reverse side of this sheet. These Portable Inverters are not recommended for tape recorder operation, except as specified in (2) below.

UNIVERSAL INVERTERS

ATR

Specially Designed for
Operating Standard A.C.
Tape Recorder, Television Set,

Dictating Machine, Radio Set, Ham Gear, Public Address System, Amplifier, Record Player, Electric Razor, Food Mixer, Vacuum Cleaner, Sewing Machine, Business Machine, Electric Drill, Fluorescent and Incandescent Lamp, and Electronic Test Equipment from D.C. Voltages in Automobiles, Buses, Trucks, Boats, Trains, Planes, and D.C. Districts. Ideal for Emergency Lighting Applications for Civil Defense, Red Cross, Rescue Work, etc., Simply Using Extension Cords.

ATR Universal Inverters are actually a combination of 4 Inverter designs in one unit! These Inverters are especially recommended for applications as mentioned above and feature complete RF frequency interference suppression, instant starting, frequency stability, and built-in power factor corrector utilizing a simple toggle switch. With ATR Inverters, the need for special equipment is eliminated. They are designed for quiet, long-life operation at high efficiency and maximum reliability. All models indicated are equipped with ATR heavy duty plug-in Inverter Vibrators. These Inverters also come equipped with four-point voltage regulator which make possible the correct output voltage for minimum to maximum loads and also help compensate for input voltages which are lower or higher than normal. The operating efficiency is in excess of 75%. To figure approximate current consumption from storage battery, divide the rated input wattage of the recorder (or load) being operated by the storage battery voltage and further divide this answer by .75 which will give the actual current consumption based on the actual load and efficiency. The battery current consumption required for a tape recorder is normally less than that drawn by ordinary automobile headlight(s). These Universal Inverters are recommended only for use with loads having power factors in excess of 70%.

ELECTRONICALLY REGULATED D.C. CONSTANT VOLTAGE POWER SUPPLIES

RELAY RACK MOUNTING TYPES

- BK (BLACK RIPPLE FRONT PANEL)
- GR (GRAY RIPPLE FRONT PANEL)

Input: 105-125 volts AC. 50-60 cycles.

Regulation of DC Voltage: Better than 1% for loads of 0 to 100 ma. and line voltage variations from 105 to 125 volts.

Isolated Output: Both positive and negative sides of the output are isolated from ground. Either side may be grounded or the output may be left floating.

AC Output for Filaments: An isolated AC voltage of 6.3 volts AC at 3 amperes is available at the output terminal connections.

Overload Protection: A fuse mounted on the front panel protects supply against external overloads or internal failure.

Input and Output Connections: All input and output connections are made to a single terminal strip conveniently located on the rear of the chassis.

Dimensions: Standard 19" relay rack mounting. Panel width: 19 inches. Panel Height: 5 1/4 inches; Depth Behind Panel: 7 1/4 inches.

Cabinet Finish: Standard Black ripple enamel.

Controls: Rear Chassis—DC output voltage control. Front Panel—P light, input power switch, and fuse.

High Quality Components: Only components of the highest quality used in this equipment insuring you years of trouble-free dependa operation.

Accessibility: By removing two small screws, the front panel may removed while the supply stays mounted on a relay track or cabinet. T allows quick and easy inspection.

MODEL	OUTPUT VOLTAGE	RIPPLE
1	200-325 V.D.C.	10 M.V. MAX.
11	75-200 V.D.C.	5 M.V. MAX.

SUB-CHASSIS MOUNTING

Sub-chassis mounting type regulated power supplies are designed to save space and money. They can be mounted on a chassis along with other components and thereby save space which would be used by a relay rack mounting supply. Savings are made in the size and cost of the cabinet required for a job along with the lower cost of the sub-chassis mounting supplies.

SAME AS MODEL 1 AND 11 EXCEPT

Dimensions: 9" wide, 8 3/4" long, 4 3/4" high above chassis, 1 3/4" clearance required below chassis. Size of cut-out required, 8 3/4" wide x 8" high. Location of four mounting holes: 8 3/4" wide x 8 1/2" high.

Chassis Finish: Aluminum.

Controls: DC output voltage control adjustable from the top side of the chassis.

MODEL	OUTPUT VOLTAGE	RIPPLE
2	200-325 V.D.C.	10 M.V. MAX.
12	75-200 V.D.C.	5 M.V. MAX.

CABINET MOUNTING

An ideal unit for bench work or assembly into equipment.

SAME AS MODEL 1 AND 11 EXCEPT

Input Connections: A line cord at rear of cabinet.

Output Connections: 5 way binding posts.

Dimensions: 5" wide, 7" high, 16" deep.

Panel Finish: Aluminum.

Cabinet Finish: Gray enamel.

Controls: D.C. output voltage on front panel.

Meters: Output voltage.

Vibrators

AUTO RADIO & SPECIAL PURPOSE VIBRATORS

These CDE replacement vibrators are designed to give long life and excellent performance in auto radios and special purpose applications. Construction features the exclusive CDE "Seal-Vent" design which seals the vibrator against contamination on the shelf and permits the unit to breathe in service. Design also insures quick starting and smooth operation as well as perfect contact alignment. Vibrators listed cover the vast majority of replacement applications. In cases where the units listed do not cover the unit to be replaced, the information given on this page should permit use of a standard replacement vibrator with simple socket change and rewiring.

COMMUNICATIONS VIBRATORS

Recent design improvements in CDE's replacement communications vibrator line have more than doubled in life expectancy of these units. The new communications vibrator offer extremely long life and excellent performance in the most demanding applications. Replacements are listed for most of the two way radio and citizens band equipment in service. More detailed replacement information is contained in the CDE Vibrator Replacement Guide to be issued shortly. Current ratings listed are maximum continuous ratings. Transmitting ratings are approximately 4 times these based on one minute transmit and four minutes receive. Information contained in the listing should permit replacement of all communications vibrator types with only a few requiring socket and wiring changes.

1965 MODEL POWERCON® INVERTERS

12 illustrates the modern styling
e 1965 POWERCON® inverter line.

These 1965 model POWERCON® inverter power supplies are being introduced throughout the summer and early fall of 1964. They feature all new designs and attractive styling to provide the ultimate in inverter power supplies for providing AC power in autos, trucks, aircraft and boats. Units are ideal for operating a wide variety of electronic entertainment devices as well as small appliances and lighting equipment.

The first model in the new line, the 12TV12 illustrated, has met with enthusiastic acceptance. This model is intended for operation of portable TV sets as well as other household appliances within the rating. Other models in the 1965 POWERCON® line will feature the same attractive styling as the 12TV12. The combination of attractive design and superior power supply design features makes the 1965 POWERCON® Line the outstanding buy in mobile, aircraft and marine power supplies.

Models are available with either square wave or sine wave outputs. Square wave models have stable 110v AC output under various loads due to built in capacity and conservative ratings. Intermittent loads will not damage the unit. Intermittent ratings listed are for loads with 70-100% power factor. Square wave units feature superior filtering and solid mechanical and electrical design to give hash-free output for interference free TV, FM and shortwave reception.

The sine-wave units have added reactors and capacitors to provide true sine-wave power — indistinguishable from commercial power. These units are recommended for electronic equipment where optimum performance is required. The sine-wave units control output voltage between 110 and 120v AC with up to 15% input variation. Units feature automatic load regulation for heavy or light loads. Sine-Wave units will operate inductive loads as low as 25% power factor without power factor correction as long as the wattage rating is not exceeded and the inrush VA does not exceed the intermittent ratings.

In the event the outstanding 1965 model POWERCON® inverter may not yet be available in your area, satisfactory performance will be obtained from the listing of current models on the following two pages.

POWERCON® Class 251 • 00

These current production model POWERCON® inverter power supplies will be superseded by the new 1965 models described previously. Ample stocks of the current models are available however and the unit can probably be obtained through late 1964 and early 1965. These current model POWERCON® inverters have the same high quality as the 1965 models but lack the styling of the new line. The choice of models in current production is quite wide permitting selection of ratings for any application. As stocks are depleted, selection should be made from the 1965 model listing.

HIGH VOLTAGE ZENER REGULATORS

REGULATE UP TO 20,000 VOLTS

Simply connect in parallel* with any high voltage power supply and automatically obtain both line and load voltage regulation as well as ripple reduction. Nominal current rating is .5 to 1 Ma. for better than 1% stabilization. Power supplies with up to 5 Ma. (maximum) may be regulated. Can be wired in series for higher voltage service (five 4,000 volt types to regulate a 20,000 Volt power supply). Twenty built in taps included, each provides a regulated voltage. Ideal for photomultiplier tubes. Use as a high voltage reference in conjunction with regulator amplifier circuitry.

Makes your DC voltage problems easy. Just wire in the two input and output connections and you are ready to operate. New patent applied for features, greatly improve reliability. Service if it should ever be required is a matter of minutes to unscrew the old top and replace with a new element. Newly designed H.V. transformer has special insulation for trouble-free performance. Output is completely isolated and either post may be grounded or operated as a floating supply. DC is filtered for 5% or less ripple. Output may be varied from full ratings down to zero by simply inserting a small Variac in input. All units rated for 5 Ma. current. Power packs 7.5 KV and higher have slightly modified construction. 115 volt, 60 cycle input. Use with above Zener Regulators to obtain 1% line and load regulation.

CONSTANT CURRENT POWER SUPPLIES

Designed for application where output current must remain constant regardless of loading resistance changes. Used for magnet fields, plating applications, gaseous lamps. Dependable magnetic current stabilizer has no moving parts, no tubes, no transistors to replace. Simply set current to desired level, no balancing or other adjustments needed. Ideal for lamp operation since operating state ionizing voltage in no way affects lamp current. Standard hum level 5%. Lower hum levels available on order.

PORTABLE HIGH VOLTAGE DC POWER SUPPLIES

New Mirror Scale Instrument Illustrated

One of the most popular power supplies on the market. Completely redesigned for greater ruggedness and convenience of operation. Widely used for powering electronic equipment and for routine breakdown and insulation testing. Output voltage is well filtered D.C. which is adjustable with convenient front panel control. Input is 115 Volt, 60 cycle A.C. Larger 6" precision 1% mirror scale movement available on order. Regulated models offer closely stabilized output voltage regardless of line or load changes.

Model	Max. Voltage	R.F. OSC. Regulated 100 Microamps	Trans. Type Unregulated 1 MA.	5 MA.
6000-1	1,000		\$160.00	\$200.00

6025	25,000	215.00	275.00	350.00

Note. Regulated power supplies are of the radio frequency type and adjust from approximately 20% to full rated voltage. The 1 and 5 milliamper types are transformer operated and have a range of zero to full voltage output. These are recommended for industrial service applications.

Mirror Scale Higher Accuracy Meter. Recommended for more exact calibration or test purposes. Add \$50.00 to any meter equipped power supply.

For additional built-in current meter (both meters are 3 inch size), including automatic meter protector circuit, add \$50.00 to any power supply.

HIGH VOLTAGE POWER PACKS

COMPACT "M" SERIES 2 TO 75 KVDC

The "M" series Power Packs are a completely new design, long life and a small package directed the use of the latest techniques and advanced materials. Many features have been incorporated with the highest quality materials, at the same time maintaining economy of cost.

Standard input voltage is 118 at frequencies from 50 to 600 cycles per second inclusive. Available also are input voltages of 220, 230 and 240 volts from 50 to 500 cycles per second inclusive. For 220 volts suffix the desired part number with "X", 230 volts "Y" and 240 Volts "Z". All units may be modified for other input voltages.

The output is filtered DC and standard potentials and current ratings are listed below. All units can be modified or any required potential and current below the values specified in the listing. The output potential can be varied from zero to the rated voltage and load by means of a variable auto transformer at the primary.

Ripple is 1% RMS or 2.75% peak to peak at rated current and voltage.

Design life is 40,000 hours at 35°C and 5,000 hours at 85°C.

Case finish is light blue gray lacquer per MIL-L-7178.

All units except the 75 KV, have two output terminals isolated from the container, permitting either terminal to be operated at ground or an intermediate point between them can be tied to ground. The 75 KV unit has a single high voltage terminal for the output. The Power Pack is normally furnished to deliver a positive output potential relative to ground. If a negative output is desired it can be shipped as such from the factory upon request. The polarity can be easily reversed as required by opening the top access port and reversing the selenium rectifier board. The remaining output terminal at low potential is left ungrounded so that the lead current be monitored if required.

New "static" line-and-load regulator
is insensitive to frequency

The Solatron[®] Line Voltage Regulator

fast... effective...

economical voltage control

The new Solatron regulator operates on a different principle than the popular Sola CV transformer. And — it should not be confused with the Sola CV since the new Solatron offers fast, effective corrective action for voltage fluctuation in **line and load**. It is **not** sensitive to frequency, and is adaptable to both wye and delta 3-phase installations. It is also considerably smaller and lighter than other regulators of equal capacity.

Output is held within $\pm 1\%$ for input variations of

either $\pm 10\%$ or $\pm 20\%$. It is maintenance-free and has no moving parts. Available in the following KVA ratings (1-phase): 1, 2, 3, 5, $7\frac{1}{2}$, 10, 15, 25, $33\frac{1}{3}$, $37\frac{1}{2}$. Voltage ratings: 120-240-480; 208Y/120 and 410Y/240 (3-phase installations use 3 units, may be either delta or wye connected).

The new Solatron is available for 50- or 60-cycle operation. Special Solatrons for 400-cycle applications are also available — as are electronic component models.

For more information, write to the Sola Electric Company or ask your distributor for Sola Bulletin VR-200.

1. No Moving Parts, Maintenance Free.

2. Adjustable Output Voltage:

Voltage may be adjusted to 10% of rated voltage and retain full regulation at any output setting.

3. Fast Response:

90% correction in less than 5 cycles; Complete correction in 10 cycles.

4. Frequency Insensitive:

Normal design range for 60-cycle units is 47-70 CPS.

5. 98% Efficiency:

At rated load and rated output voltage.

6. Low Harmonic Content:

No harmful waveform distortion. Units furnishing less than 1% total harmonic content are optional.

7. Power Factor, Load, or Frequency:

Can be varied individually or simultaneously without affecting the output voltage level.

8. Easy to Service:

Control circuit is on removable end plate, can be serviced or replaced without disturbing power connections.

9. Ultra Compact:

Smaller and lighter than other standard regulators. Less than 17 pounds per KVA, less than 6 x 6 x 6 inches per KVA. All power windings on one magnetic core.

Sola CVDC Power Supplies

FAST, RELIABLE VOLTAGE REGULATION FROM A LOW-COST SOURCE

CVDC circuitry is so trim and simple that it can offer the utmost in performance and reliability. The constant-voltage transformer (originated by Sola) offers inherent current-limiting action that allows utilization of efficient, economical semiconductor rectifiers with low forward voltage drop. CVDC has these specific advantages:

Constant-voltage Sola transformer provides $\pm 1\%$ regulation for line-voltage variations as great as $\pm 15\%$, serves as the heart of CVDC power supplies for voltage-sensitive equipment.

Fast, dependable line-voltage regulation: within $\pm 1\%$ for fluctuations of $\pm 15\%$; voltage will return to regulation envelope in approximately 50 milliseconds.

Load regulation: from $\frac{1}{2}\%$ to 8% , one half to full load.

Automatic current limiting; short circuit protection; withstands load faults; high overloads cannot damage power supply or equipment components.

High efficiency: upwards of 75% ; low input-power requirements.

Simplified operation: no adjustments or maintenance; continuous duty.

Convection cooling.

Ripple: 1% rms maximum.

Ambient operating temperature: 40°C maximum.

Fixed output for fixed, intermittent, variable, or pulse loads.

All inputs 100-130 volts, 60 cps.

STABILINE® automatic VOLTAGE REGULATORS

- THE MOST EXTENSIVE LINE OF AUTOMATIC VOLTAGE REGULATORS
- RATED OUTPUTS FROM 0.25 TO 100 KVA

STABILINE Automatic Voltage Regulators deliver a constant output voltage regardless of variations in input voltage or changes in load current. They are conservatively rated, ruggedly built precision products offered in a wide range of types and ratings. Submit specifications of electrical ratings desired.

DC Regulator Control

Provides automatically regulated d-c voltage adjustable from 25 to 100% of maximum with an input variation of $\pm 10\%$ in a-c line voltage at 50/60 cycles. Accuracy is $\pm 1\%$ of 100% voltage setting. Designed for use with a motor-driven POWERSTAT Variable Transformer and associated d-c components supplied by the user. Supply can be from either a single-phase full-wave or a 3-phase full-wave unfiltered source. Error detection requires either 1 milliamperes, 300 kilohms or 10 milliamperes, 15 kilohms supplied from the d-c output.

TYPE CB5001

EMT series

Electro Mechanical Transistorized types in ratings from 2 to 100 KVA. Control circuit is completely transistorized. Speed of response sufficiently fast for most applications.

TYPE EMT4115

TYPE EMS42100

STANDARD

MINIATURE

AMPERITE THERMOSTATIC DELAY RELAYS

Amperite Thermostatic Delay Relays are actuated by a heater . . . can therefore be used on A.C., D.C., or pulsating current. Being hermetically sealed, Amperite Relays are not affected by altitude, moisture, or other atmospheric conditions. **REPLACED AS EASILY AS A RADIO TUBE.**

CIRCUITS SPST: Available only — normally open or normally closed.

HEATER VOLTAGES AVAILABLE: 2.5, 5.0, 6.3, 12.6, 26, 50, 115V.

For 220V use a 6500 ohm-5 watt resistor in series with 115V heater.

HEATER WATTAGE: Standard and Miniature Relays—all voltages—2w prox. All heaters may be operated continuously. Heaters will not be damaged by a 50% voltage overload for duration of 1 hour or less.

VARIATION OF DELAY WITH HEATER VOLTAGE

FIGURE 1 — Effect of change in heater voltage on delay in seconds. Only low voltage heaters (2.5 to 26 V.) incorporate heater voltage regulations as shown in this diagram.

For 22 to 30 V. supply: We recommend Amperite Delay Relays with 26 V. heaters for airplanes and similar power supplies. These heaters are regulated for battery variation of 22 to 30 V. as shown in this diagram.

CONTACT RATING

	Delay	Contact Rating Non-Inductive	DC Voltage Breakdown	
			Contact-to-Contact	Heater-to-Contact
STANDARD RELAYS	2 to 10 Sec.	115V — 3a AC	250V	500V
	15 to 180 Sec.	115V — 3a AC	800V	800V
		220V — 1a AC	800V	800V
MINIATURE RELAYS	2 to 10 Sec.	115V — 2a AC	250V	500V
	15 to 180 Sec.	115V — 2a AC	800V	800V
		220V — 1a AC	800V	800V
FLASHERS		— 1/2a AC	250V	500V

AMBIENT TEMPERATURES: Relays are compensated for temperatures of -55° to $+80^{\circ}\text{C}$. (Relays can be operated from -80°C to $+125^{\circ}\text{C}$ without damage). Ambient temperature tolerances depend on type. Low voltage heaters 26V or less have better ambient compensation than relays with 115V heaters. If the relays are actually to be used over ambients of -55°C to $+80^{\circ}\text{C}$ it is advisable to have each relay tested at the factory over the ambient. A nominal charge is made for this service.

DELAYS AVAILABLE: From 2 to 180 seconds. Relays can be used in series to obtain longer delays. The delay of any individual relay can be increased up to 50% by using a resistor in series with the heater. Relays with short delays such as 2 to 5 seconds can be increased 100%.

CONTACT DROP: -0.1V — Prox. at 1A.

LIFE of any individual relay will depend on the service the contacts are subjected to. With a 115 V. — 2A A.C. non inductive load the contacts will withstand at least 250,000 operations. **SHELF LIFE** of Amperite Delay Relays is over 10 years.

INDUCTIVE A.C. LOADS: When breaking an inductive A.C. load, use a condenser of .01 to .1 mfd across contacts. In some cases, putting a 20,000 ohm, 5w. resistor across the contacts reduces the arcing considerably.

Relay Contacts should not be used on voltages above 220V.

INSTANTANEOUS RECYCLE: This can be obtained by using a normally open Amperite Delay Relay in conjunction with a DPDT Magnetic Relay as shown at left. If normally closed is required — use a normally open Amperite Delay Relay — and use the NC contacts on the magnetic relay. Choose the Amperite Delay Relay for the voltage required and the delay required (e.g. — 115N030 — would be used on 115 volt supply — for a 30 second delay).

LONG RECYCLE RELAYS: are also available. For example, Amperite Delay Relay 115N07T has a delay in closing of 3 to 8 seconds. After heater is disconnected, contacts will remain closed for 30 seconds minimum. Write us about your requirements.

-FLASHER CIRCUITS-

FLASHER CIRCUIT-NORMALLY CLOSED CONTACTS
LOAD IS INDEPENDENT OF HEATER CURRENT.

Flashers operate approximately 1/3 on, 2/3 off. The percentage time on can be increased by reducing the voltage of the heater.

Flashers available only in quantities of 12 or less. Cannot be supplied in production quantities.

Normally closed flashers are standard, and are indicated by the letter "F." The number following letter "F" denotes flashes per minute. For example a 6F30 flasher, has 6.3V heater, normally closed 30 FPM with a ± 15 flashes per minute tolerance. A 6F30T, would be the same type but in 9-pin miniature. Flashers are available from 30 to 90 Flashes per minute with tolerances as shown in the chart below:

FLASHERS have contact rating of 1/2a 115V AC, non-inductive.

ELECTRICAL RESET STEPPER M.E.R.

Type M.E.R.—A direct drive (steps on energization) electrical reset stepper with positive mechanical reset interlock actuated by the reset magnet and unlatching the first energization of the step magnet. This device causes positive reset on a short pulse as one hundredth of a second or more from its own selection contacts. Unit is capable of counting in groups of 2 to 21, then resetting automatically. By interconnecting two or more steppers, count can be increased to any desired total counting by tens or any other convenient multiple. Unit can be used to control a sequence of operation and then automatically reset to the initial or starting position. Maximum steps per second, 20. 24 points; 22 active contacts. Coil, 115 v., will operate satisfactorily at 15% below or 10% above this voltage. Operating coil rated 30 VA, 18 w.; reset coil rated 9 VA, 7 w. Size, 3 1/4" lg. x 1 1/4" w. x 3 1/4" h. Shpg. Wt., 11 1/2 oz.

Available in both intermittent and continuous duty types. Intermittent duty should not be energized for more than 5 consecutive minutes, or be permitted to rise more than 85°C. above 24°C. ambient rating without giving sufficient time to cool between operation cycles. Continuous duty types are designed so they will not rise more than 85°C. above the 24°C. ambient temperature rating when operated at rated load. Plunger has slotted end with 1/8" diameter hole for coupling. In chart, (I) indicates intermittent duty type, (C) indicates continuous duty type.

Class 88 Small AC-DC General Purpose Relay.

Open Type Relay. Has 10 ampere silver alloy contacts. Tinned solder terminals, spaced for easy wiring. One #6-32 tapped mounting hole with locating boss. Weight, 2 ounces.

The General Purpose Relay with Telephone Type Reliability

The MAGNECRAFT 88 Relay is an abrupt departure in clapper type relay design. Dimensionally interchangeable with relays made by others the 88 has been developed to provide Telephone Type Relay reliability at general purpose relay prices.

Unique in relays of this type MAGNECRAFT 88 Relays have rugged, precision-built hinge-pin armature bearings with over-size bearing surfaces—the same construction used in the finest telephone type relays for lowest friction and maximum contact effectiveness with stabilized adjustment over long life.

Glass insulation provides great dielectric strength unaffected by humidity and temperature changes.

Molded Nylon bobbins with ruggedized coil terminal inserts eliminate possibility of shorts.

Built-in contact wipe with riveted contacts further advance reliability through long life.

The many refinements, plus MAGNECRAFT Quality Control and Inspection Standards give you hidden values beyond price—unseen values that keep making friends through years of dependable service.

When you inspect and compare you will soon see that many MAGNECRAFT 88 extra values are not hidden.

Micro-Miniature Rotary Relays

MAGNECRAFT Class 44 Rotary Relays have been developed to provide increased reliability in the crystal can size. Here are a few of many areas in which improvement has been made:

1. Frame and header assembly of rugged bridge-type construction—assures greatly increased resistance to distortion from shock, vibration and temperature—to military specification requirements
2. Balanced armature—minimizes the effect of gravity, shock and vibration on operating reliability.
3. Hinge design—oversize, instrument type bearings at BOTH ends.
 - a. Minimizes friction for increased sensitivity and greater contact pressure.
 - b. Increases operating reliability and life.
4. The latest and finest developments in high temperature insulation.
5. Hermetically sealed in inert gas for maximum protection against severe ambient conditions.

Contact combination: Double Pole, Double Throw
Contact rating: 2 amperes at 28 VDC or 115 VAC, non-inductive.
Operate Time: 5 milliseconds maximum with nominal voltage
Release Time: 5 milliseconds maximum.

MAGNECRAFT RELAYS

These Dry Reed Relays by MAGNECRAFT have pre-adjusted GOLD contacts completely protected from dust, contamination and tampering by hermetic sealing in an atmosphere of inert gas, inside a glass capsule. The isolated switching contacts are actuated by a coil around the glass capsule.

MAGNECRAFT Relays bridge the gap between electromechanical relays and complex, costly solid state switching devices through stabilized contact resistance; high speed positive switching; sensitive operation; and adaptability to complex logic circuits plus ability to better withstand over-voltage transients and higher ambient temperatures.

Encapsulated MAGNECRAFT Relay Assemblies with Printed Circuit "plug-in" terminal pins. (see hand with circuit board at lower left)

Illustration "A" at right shows the "plug-in" terminal pins of an Encapsulated MAGNECRAFT assembly. Illustration "B" shows the relay on the Epoxy mounting board before encapsulation. The rugged terminal posts (1) extend through the mounting board (2) to form the terminal pins (3).

The leads from the capsule are soldered to the rigid terminal posts with the capsule and coil in position; stresses created when leads are bent that transmit to contacts inside the capsule are completely avoided.

Encapsulation eliminates breakage, protects coil, leads and terminals against mechanical injury and atmospheric change; provides fast and economical circuit board mounting.

Air Dashpot Time Delay

Operate Time Delay

Class 110 Air Dashpot Time Delay Relays

The new MAGNECRAFT Class 110 Relay has been developed to provide, in a small, inexpensive Time Delay Relay, the high reliability and the great life users have learned to expect from MAGNECRAFT Relays.

In this unique development, proven high reliability relay contacts and switching mechanism are merged with a precision-built air dashpot timer. The result is a masterpiece of simplicity and a minimum number of moving parts that sets new standards of compactness and long life reliability.

The Air Dashpot Timer is built of non-aging inert materials to provide the longest life in reliability through long life; The cylinder is tempered glass, precision ground to dimensions and polished for lowest friction. The precision fitted piston is dimensionally stable, low friction graphite. All metal parts are corrosion resistant.

The Solenoid Assembly is unique; a new patent-applied-for invention. When the operating coil is energized the Solenoid pulls out the dashpot piston at the rate for which the timing adjustment is set. Through the timing period, the relay contacts remain in the de-energized (normal) position, completely free from any tendency to make premature or faltering contact.

At the end of the timing period (when the Dashpot piston travel is complete) the Solenoid Plunger instantaneously completes the magnetic circuit which snaps in the Relay Contacts and holds them under full magnetic power until the coil is de-energized.

When the coil is de-energized relay contact dropout is instantaneous and positive; the Solenoid Plunger Spring helps the relay release spring snap the contacts to the de-energized position.

1. Terminal Board.
2. Heavy Duty Relay Contacts have built-in contact wipe.
3. Ruggedized relay armature.
4. Pin type armature hinge. The same precision built hinge used in the finest telephone type relays.
5. Compression Spring—Compresses when solenoid pulls out dashpot piston; when coil is de-energized, helps snap contacts to normal position and returns piston to start position.
6. Air Dashpot Cylinder—Specially treated glass, precision ground and polished.
7. Graphite Piston—Controls travel of solenoid plunger through setting of timing adjustment.
8. Timing adjustment screw—Provides stepless adjustment from 0.2 to 30 seconds.
9. Solenoid Plunger—When coil is energized the plunger pulls out dashpot piston; at end of travel the plunger instantaneously completes magnetic circuit that pulls in contacts and maintains full contact pressure until coil is de-energized.

Some of the Features

1. High Reliability through long life:
 - a. Proven high reliability relay contacts and switching mechanism.
 - b. Precision-built Air Dashpot of inert, non-aging, low friction materials.
 - c. Solenoid assembly completes magnetic circuit instantaneously for positive switching action; protects contacts from chattering and frying.
 - d. All metal parts protected from corrosion.
 - e. Extreme simplicity — few moving parts; none subjected to distortion.
2. 0.2 to 30 seconds Timing Adjustment with a single screw.
3. Instantaneous release. Air Dashpot reaches "start" position within 0.2 second.
4. Operates in any position. Timing should be set in installed position.
5. Timing Repeat Accuracy $\pm 10\%$.
6. Temperature Range, -65 to $+165^\circ\text{F}$.
7. AC and DC operation. AC models rectified for DC reliability from AC service.
8. Low Power Consumption. DC, 4 watts; AC, 7 volt amperes.

MINIATURE PLUG-IN LOW PROFILE LOW COST (SERIES MKTR)

Despite its compact size this new totally enclosed, low cost, low profile miniature relay has not compromised the high quality of its progenitor the Series MK open relay. The low mounting profile (dust cover included) has been made possible by incorporating the frame of the relay with the connector-header. Thus a certain basic hardware has been eliminated resulting in important size reduction. Versatility is also assured since the standard terminals can be used with Amp snap-on connectors, printed circuits, or plug-in receptacles. Also available with studs for chassis mounting. Termination can be used for soldered connections. The plug-in-receptacle is true 10 ampere construction. Lugs can be used for either solder or snap-on connections.

TIME DELAY RELAYS

PLUG-IN TYPE (SERIES TRP)

The series TRP Time Delay Relay provides a pre-set delay between the closing of one set of contacts and the subsequent operation of a set of SPDT load contacts.

The series TRP initiates from a sustained switch closure to L1 and L2. The unit resets instantaneously when this circuit is opened; ready for another timing operation.

The series TRP is available in two operational options:

Type "A"—If sustained closure is interrupted during time cycle, unit will not reset. When closure is again made, timing will continue to give originally selected time delay.

Type "B"—If sustained closure is interrupted during time cycle, unit will instantaneously reset.

REED RELAYS — 5 STANDARD TYPES

FR

FRB

FRA

FT

FRB

In computer, data processing and guidance system development, design engineers are enthusiastically applying dry reed relays in place of switching diodes. The reasons: miniature profile—life expectancy exceeding 100,000,000 operations—less heat generated compared with switching diodes—3 millisecond operating time and very high resistance in the open contact stage.

To efficiently serve the growing demand for dry reed relays in these and other applications, Line Electric now stocks these 5 standard types for immediate delivery in prototype quantities.

Includes Indicator, Plate, Thyatron
and Latching Versions in Unenclosed
and Enclosed Types

Simple, rugged, low cost relays handling substantial power for small size. Uncomplicated design provides unusual flexibility for making and changing connections and mounting. Stock includes relays in versatile enclosures, some with indicator light, also plate, thyatron and latching versions. Wide commercial and industrial use where economy and versatility are important.

Basic (Unenclosed) Relay: All connections terminate on barrier-type terminal panel on combination solder—quick-connect

(push-on) lugs which accept AMP 110 female connectors. The terminal panel is conveniently incorporated into printed circuit boards. Fixed contacts are integral inlay on terminal itself. Normally furnished with a 6-32 x 1/2" mounting stud and non-tum boss (or lug for 4-pole relays). A 6-32 threaded hole is optional. Unenclosed relays can also be mounted by plugging their panels into Ohmite SOGPR sockets. See "Socket" following.

Contact Ratings: Two ratings—fine silver contacts, 5 amps at 115 VAC or 32 VDC; silver-cadmium contacts, 10 amps.

Insulation: Tested at 1500 VAC.

Coil Wattage: 1.4 watts DC operation; 160 watts (2.0 volt-amps) AC except 2.4 watts (3.70 volt-amps) for 4-pole AC and AC latching relays.

ENCLOSED RELAYS (GPRTA-, GPRTT-, GPRTS-, GPRTB-). Four types of clear plastic enclosures as follows:

Chassis Mounting Types: "GPRTA"—("Terminals-Above-Chassis" type) has terminal panel opposite to mounting flange; "GPRTT"—("Terminals-Through-Chassis" type) has terminal panel on same end as mounting flange, requires chassis cutout; "GPRTS" type ("Terminals for Socket Use") is similar to GPRTT but has no mounting flanges. It is intended strictly for plug-in mounting in Ohmite socket "SOGPR" (see "Socket" below).

Plug Base Type: "GPRTB"—employs octal plug for 1 and 2 pole relays; 11-pin plug for 3-pole. The octal plug base is integral with relay for rigidity—UL designed with recessed pins which meet UL spacing requirements (150V).

MODEL GPR GENERAL PURPOSE RELAYS

Socket (SOGPR): Unique socket fits the terminal panels of all GPR relays and provides over-the-surface spacing to meet UL requirements for 150 volts. Requires chassis cut-out to mount. Hold down springs (see illustration) for unenclosed and enclosed relays, are provided with each socket but are not required except under conditions of vibration or shock. Socket solder terminals will also accept AMP 110 quick-connectors. See socket listings.

Indicator Relay: Incorporates light bulb to indicate energized condition of coil. Stocked only in GPRTP enclosures described in preceding. Neon bulb furnished with coil ratings 70 volts and above; incandescent bulbs for coil ratings below 70 volts.

Plate Relays: Feature same physical construction as standard general purpose relays but are adjusted for greater sensitivity and can be used as electronic circuit controls, i.e., in the plate circuits of standard vacuum tubes.

Thyratron Plate Relay: Designed specifically for plate circuit of thyratron tubes 2050 and 2D21 with 115 VAC supply (see diagram). Also suitable for operation in series with silicon controlled rectifiers from a 115 VAC supply. Ready to work, no capacitors or adjustments required, no chatter. Available unenclosed and in most GPR enclosures.

6PDT Latching Relay (GPRLE)

Enclosed Latching Relay (GPRLETP)

Latching Relay: Consists of two GPR relays with armatures linked so that the n.o. contacts of one are mechanically latched in closed position when, and after, this relay is energized. When 2nd relay is energized, first relay restores and latches 2nd. Permits switching of twice the number of circuits and holding without coil current. Unenclosed type "GPRLETP". Enclosed type "GPRLETP" in clear plastic case with Jones plug P-324-SB fitting S-324-AB socket.

UL & CSA Approval: Column heads in the stock tables carry the UL (Underwriter's Laboratories) or CSA symbol (Canadian Standards Association) where such approval has been granted. The columns marked with a UL symbol are grey tinted and these relays are subject to UL Reexamination service. GPRX and GPRLEX relays in the grey areas carry the UL stamp. GPRTPSX, GPRTPX, and GPRLETPX relays in the grey areas are recognized under the "UL components program." The acceptability of

such relays by UL depends upon their combination with other equipment such as sockets, etc., and therefore they do not carry the UL stamp.

MODEL DO LATCHING RELAY (DOLEX-)

DOLEX-3T, 3PDT
DOLEX-5T, 4PDT

Consists of Model DO relay and a "reset magnet" with both armatures mechanically latched so that the normally open contacts of the relay remain closed when the relay energizing voltage is removed. The relay releases to normal position when the reset coil is pulsed. Permits "holding" of circuits without continuous coil current. Coils of stock units (both relays and reset coils) are 115VAC. Available with 3 or 4-pole relays. Weights: 3-pole—16.5 oz.; 4-pole—17 oz.

MODEL DOSY RELAY
FOR PLATE CIRCUIT OPERATION

The high operating sensitivity makes the DOSY relay adaptable to a wide range of electronic control circuits, such as plate circuit controls, etc.

The insulation is of high grade, molded phenolic material. At 115 v. AC or 32 v. DC, non-inductive load, Model DOSY relay has a contact rating of 15 amperes. Coils of stock units (both relays and reset coils) are 115VAC. Available with 3 or 4-pole relays. Weights: 3-pole—16.5 oz.; 4-pole—17 oz.

MODEL DOS LATCHING RELAY (DOSLEX-)

DOSLEX-1T

Consists of Model DOS relay and a "reset magnet" with both armatures mechanically latched so that the normally open contacts of the relay remain closed when the relay energizing voltage is removed. The relay releases to normal position when the reset coil is pulsed. Permits "holding" of circuits without continuous coil current. Coils of stock units (both relay and reset magnet) are 115VAC. Weight: 14.2 oz.

TIME DELAY TYPES

DB & DM SERIES With their adjustable time-delay range, these relays excellent for use in preheating tube filaments; for specialized lighting circuits, photographic controls, protection applications, etc. DB provides time-delay before break. DM provides delay before make. Both series utilize bi-metal thermal units which can be adjusted for delays from 5 to 60 seconds. Cooling of the thermal units for proper re-cycling requires 8 to 10 times the delay period.

SOLENOIDS

TYPES 38, 39, 40, 41, 42, 51 Solid frame solenoids using high-grade steel in all parts of the magnetic circuit. Carefully controlled annealing, after all machining operations are completed, assures maximum efficiency. The frame is dovetailed and staked to the end plate, adding mechanical strength and increasing the performance of the magnetic circuit. Plungers and plunger stops, which are made of annealed and specially processed steel, are available in three standard types for specific operating requirements. Type 51 is a laminated frame solenoid and has been designed and engineered to meet all of the requirements of the highest quality A. C. solenoid. Special production techniques and rigid quality control combine to provide a highly efficient unit. The frame is composed of silicon steel laminations securely riveted to a steel frame. Pole faces are precision ground and equipped with copper shading rings. Silicon steel laminations are also used for the plunger.
